

Moseka na marafiki zake

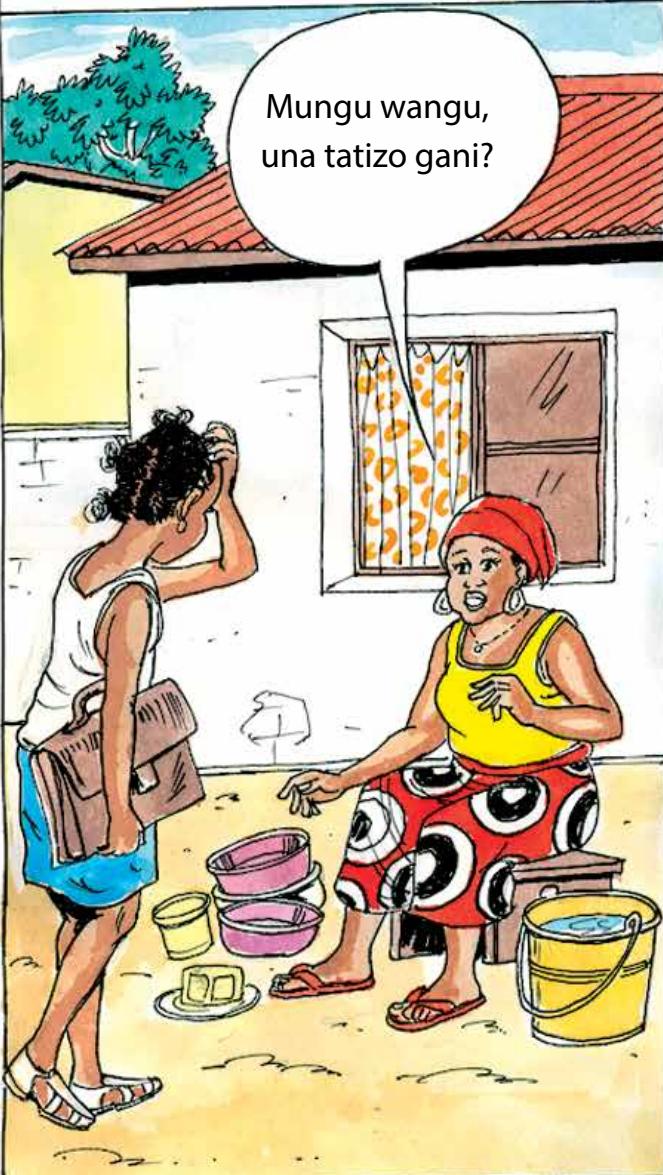

Kuelekea katika
maisha mazuri
wakiishi na
kisukari

Baada ya kutoka shuleni, wakati akirudi nyumbani, Moseka anajisikia mdhaifu sana.

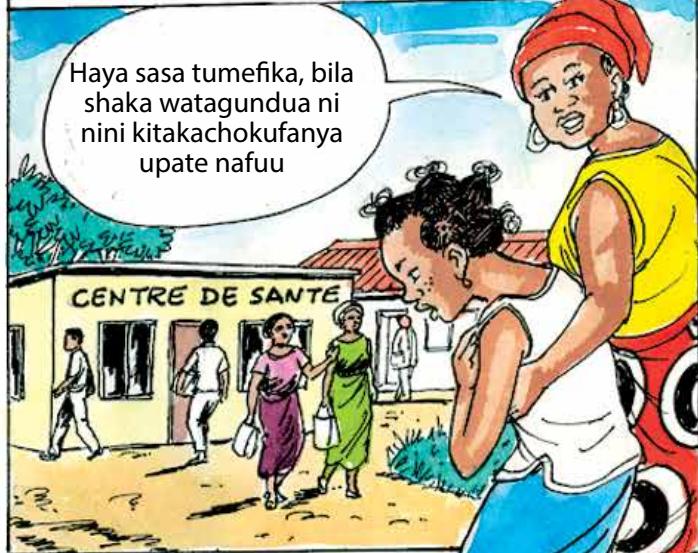

Moseka sasa anatapika

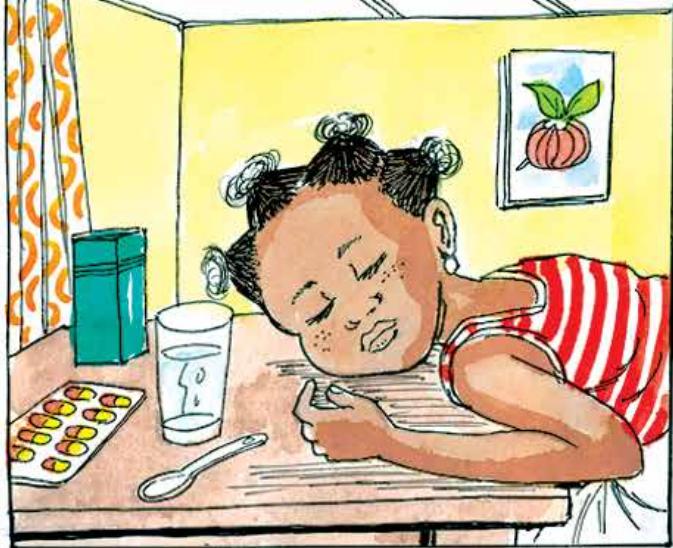

Mwanangu
anaumwa sana!

Mama yake anampeleka Moseka kwenye
kituo cha afya kilicho karibu

Moseka anakunywa dawa,
lakini hapati nafuu

Mama yake anamkuta anakaribia kuzimia

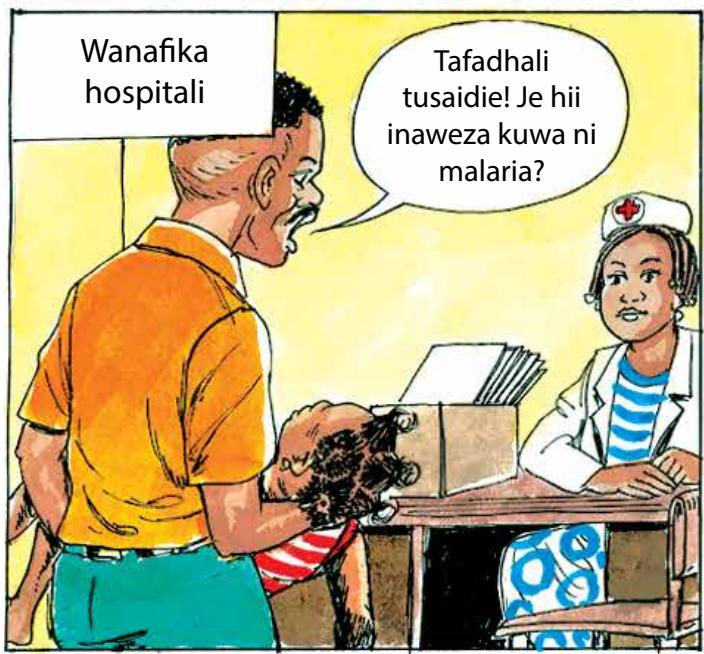

Nisaidieni !!

Mungu wangu!

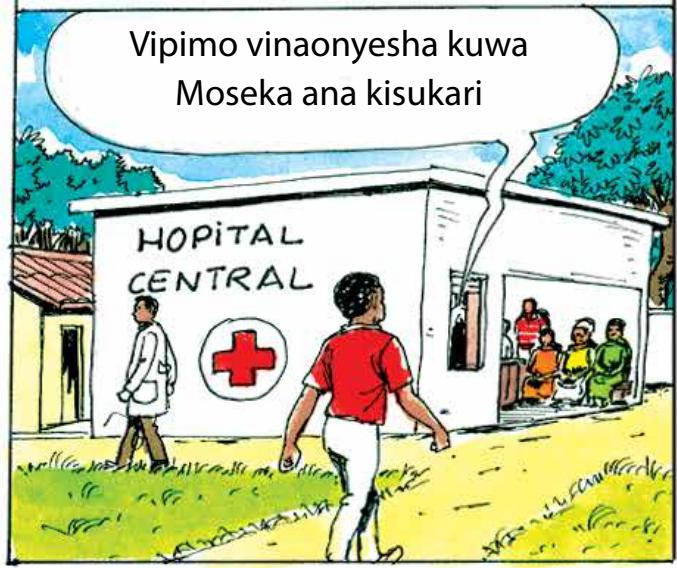

Wanafika
hospitali

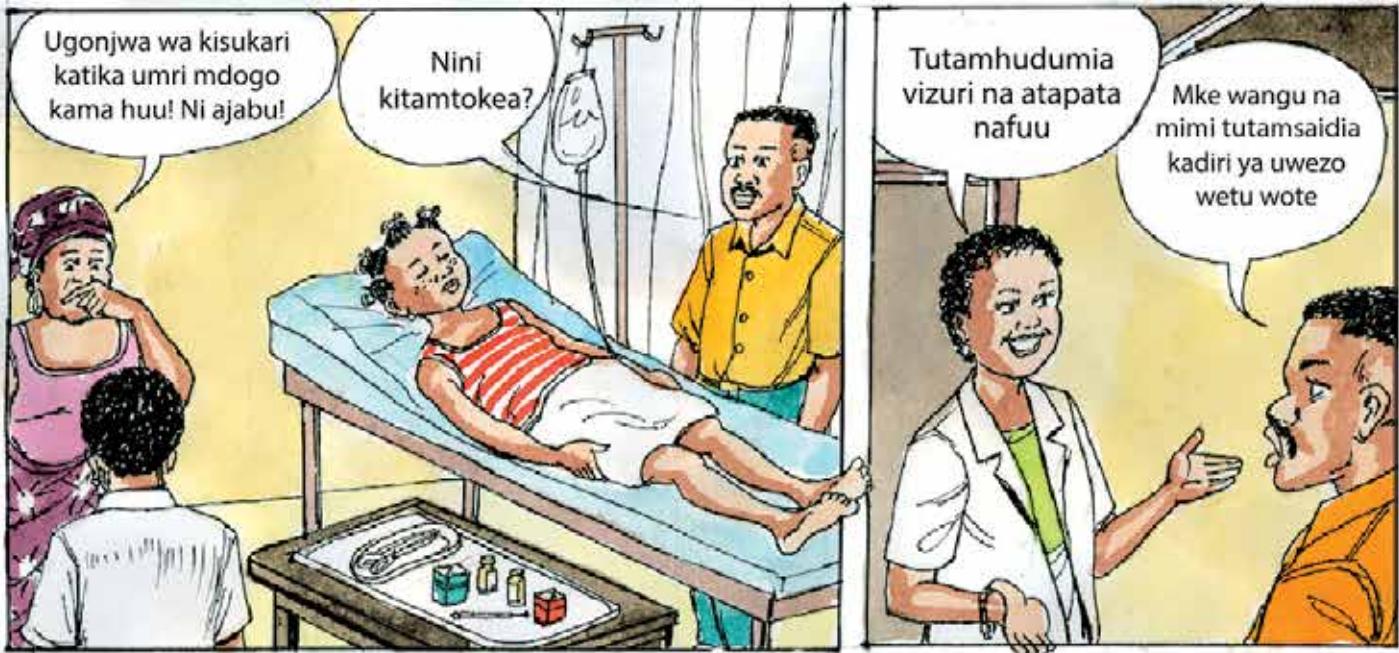

Tafadhalii
tusaidie! Je hii
inaweza kuwa ni
malaria?

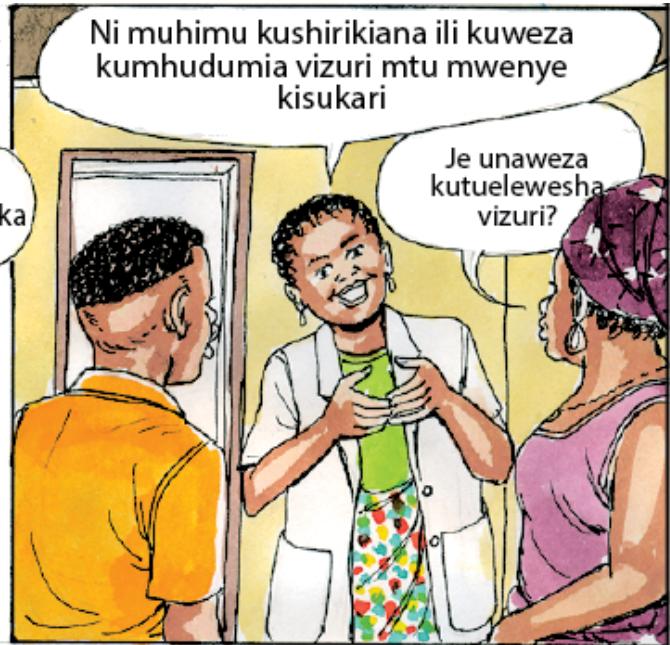

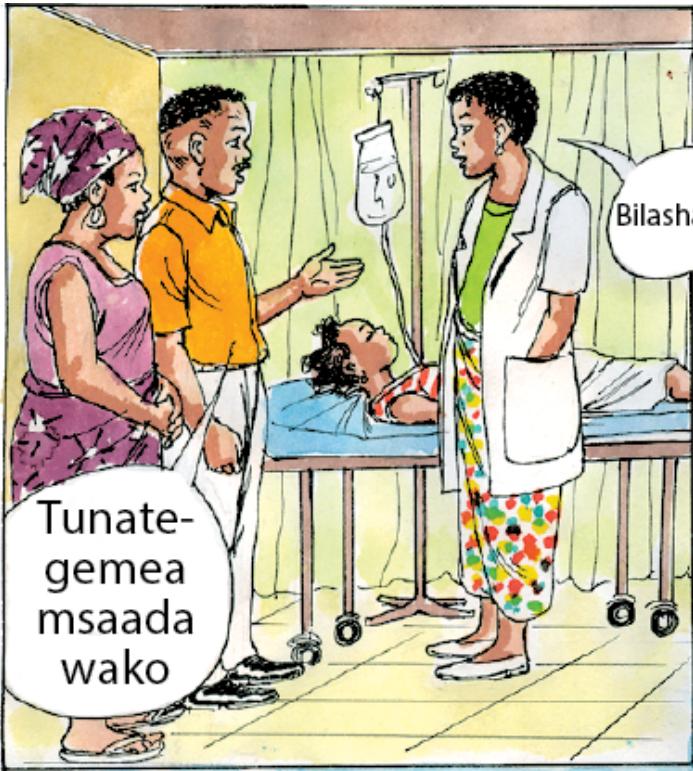

Nesi anayemhudumia Moseka anabaini kuwa anakojoa sana.
Anapima mkojo wake.

Vipimo vinaonyesha kuwa
Moseka ana kisukari

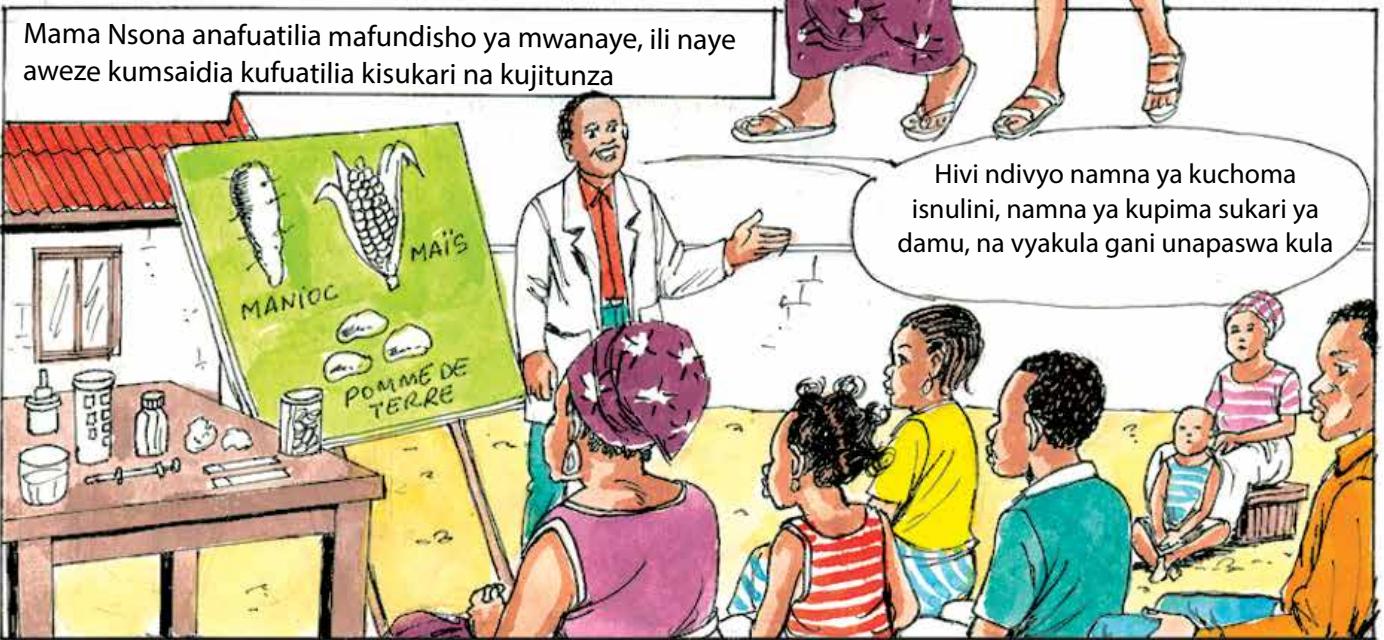

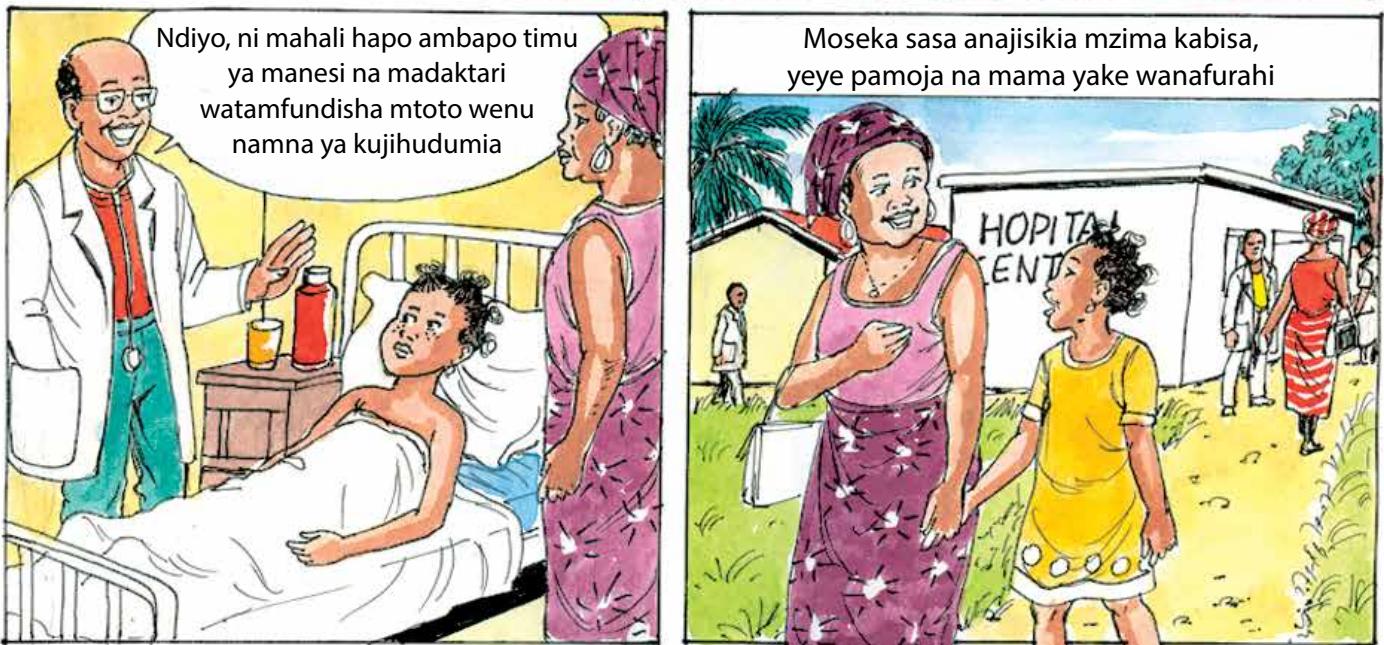

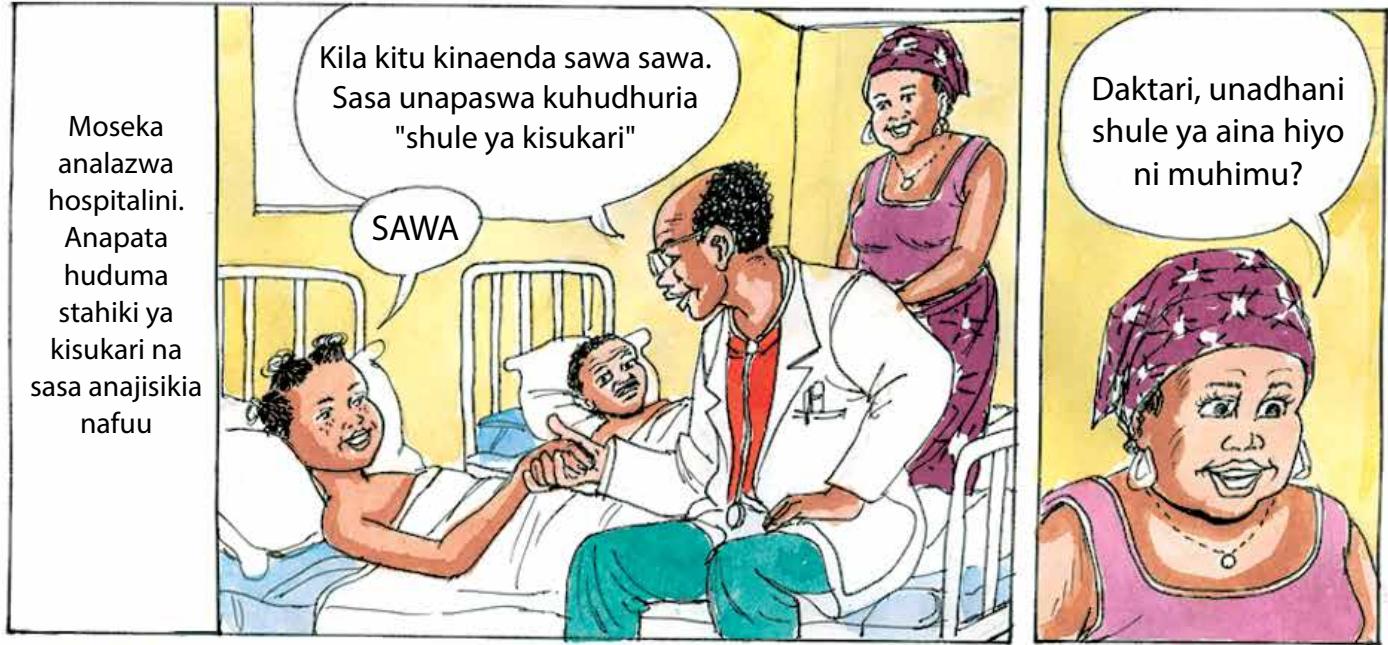

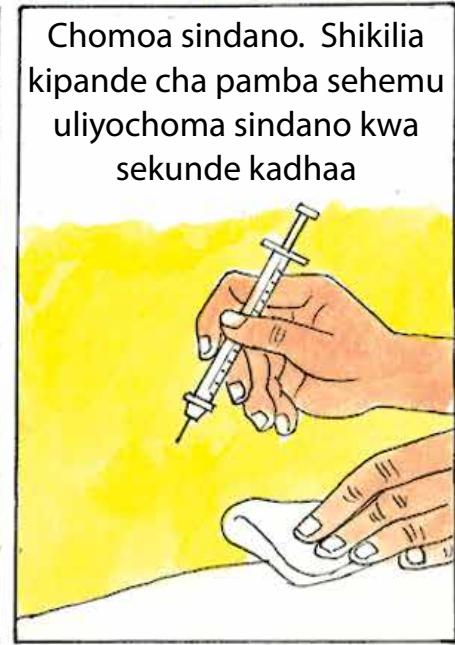

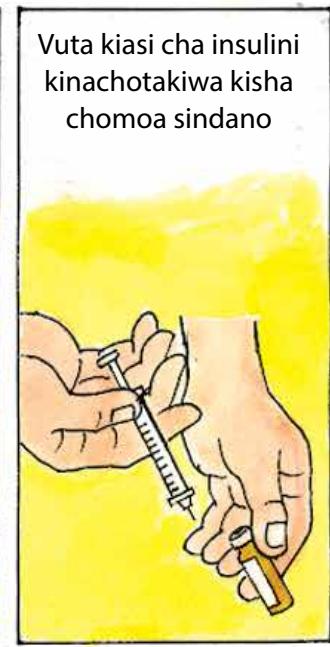

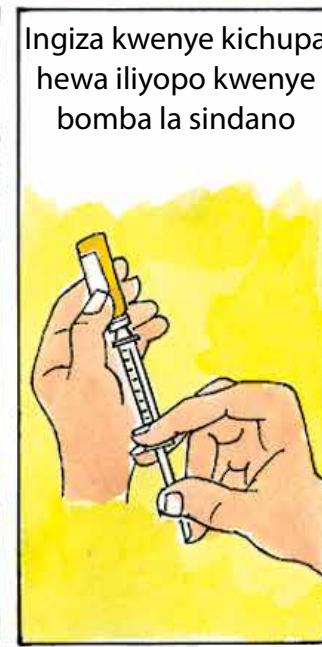

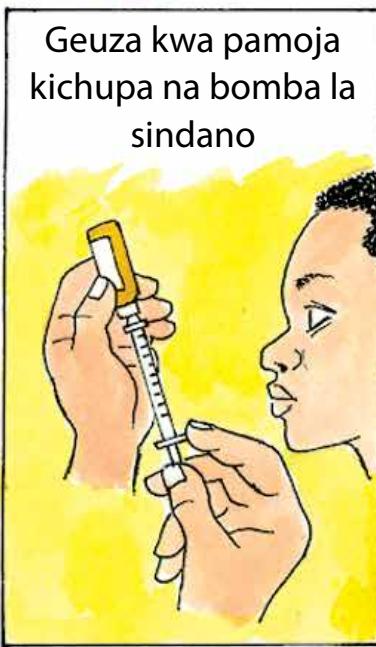

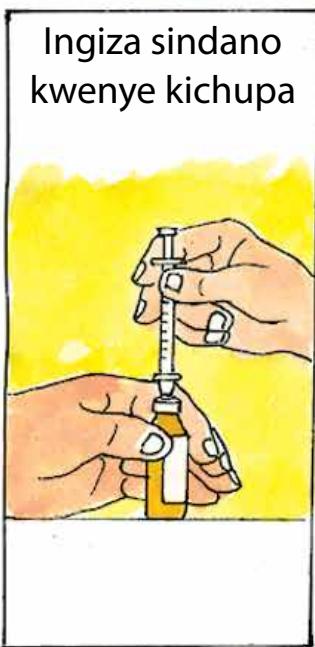

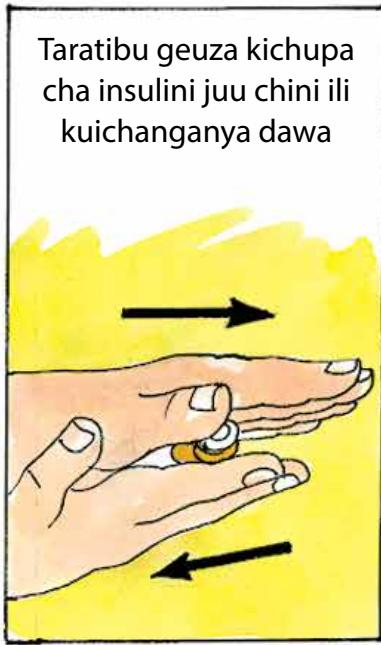

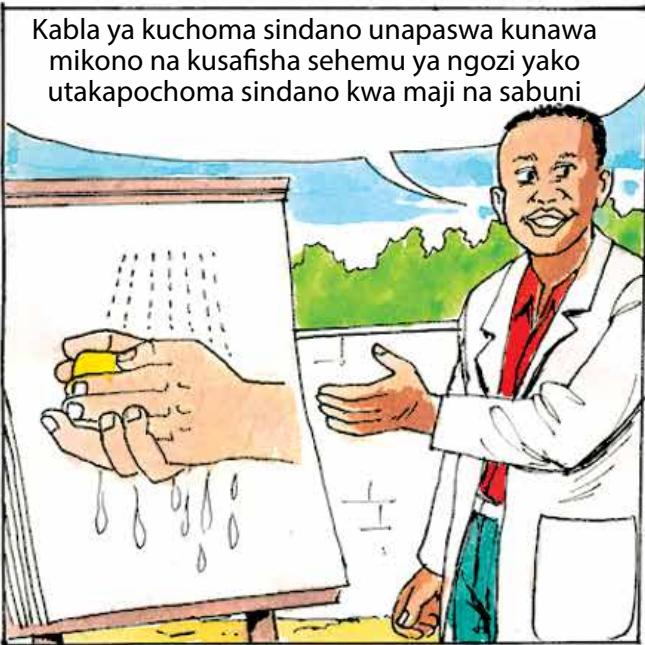

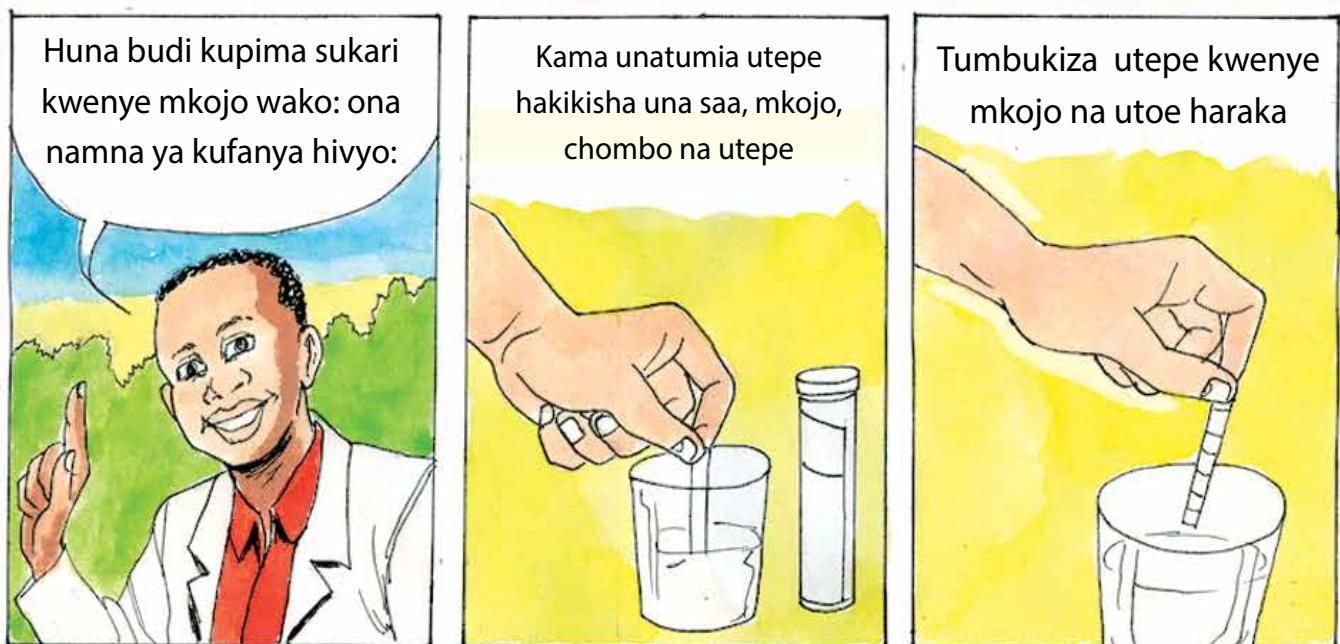

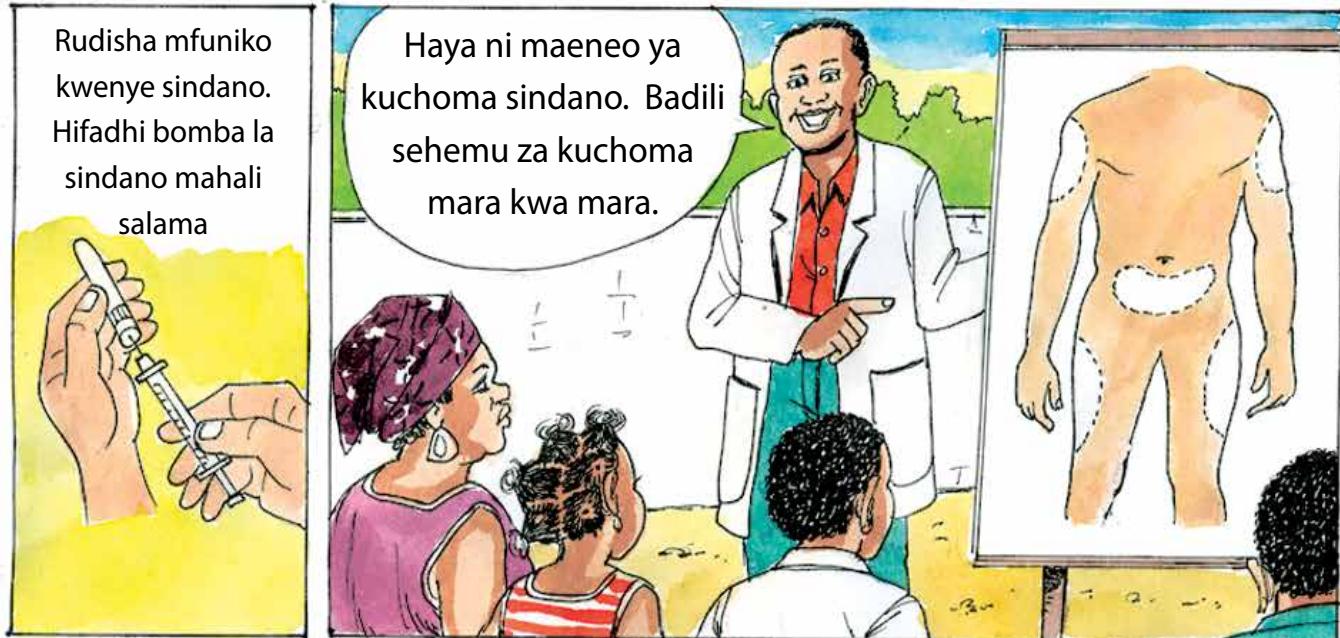

Timu inajumuisha mgonjwa anayefahamu ugonjwa vizuri, nesi ambaye anashauri na kusaidia kutoa tiba, na daktari ambaye mara kwa mara anaafuatilia hali ya mtoto

Utahitaji kuwa na mashine ya kupima sukari kwenye damu na utepe kwa ajili ya aina hiyo ya mashine

Soma maelekezo kwa makini. Tazama namba msimbo ikibidi. Angalia betri, namna utepe unavyowekwa, na hakikisha kuwa mishini ni safi

Ikiwa namba msimbo kwenye mita inatofautiana na namba iliyopo kwenye chupa ya utepe, ibadilishe. Osha mikono yako kwa maji na sabuni. Weka utepe kwenye mita. Mita itaanza kusoma yenewe

Tobia ncha ya kidole chako kwa kipini maalum

Binya tone dogo la damu na gusha kwenye utepe ili damu ifyonzwe na utepe. Mita itaanza yenewe na itatoa majibu, mara nyingi ndani ya sekunde tano

Soma majibu kwenye kioo cha mita (yako katika mfumo wa mg/100ml au mmol/L).

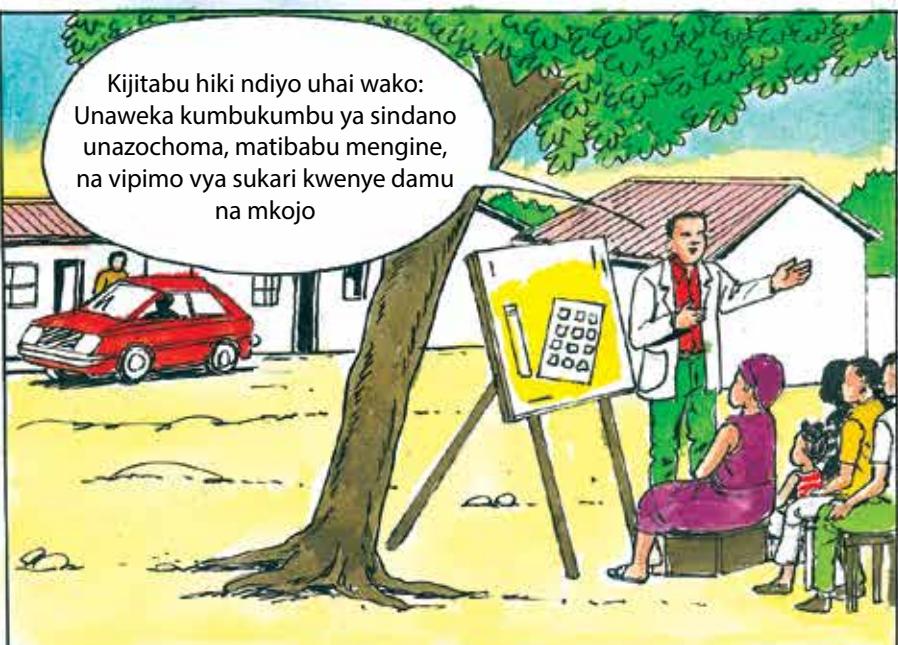

Andika majibu haya kwenye kijitabu chako. Ikiwa kiwango cha sukari kipo juu sana au chini sana wasiliana na mtoa huduma wa afya.

Atakusaidia namna ya kuboresha matokeo yako.

Kijitabu hiki ndiyo uhai wako:
Unaweka kumbukumbu ya sindano unazochoma, matibabu mengine,
na vipimo vya sukari kwenye damu na mkojo

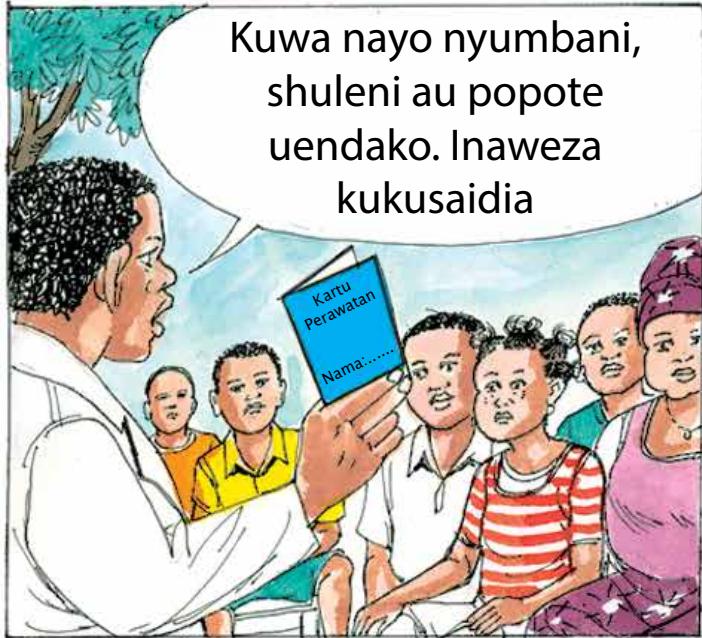

KADI YA TIBA

:

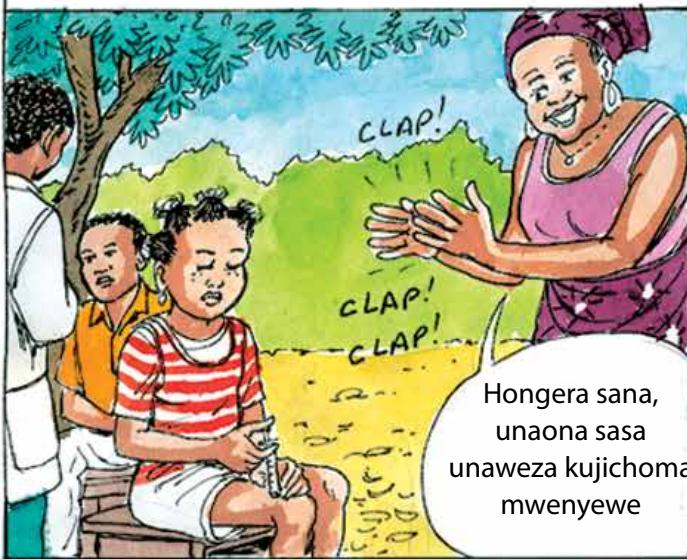

Jina:

Mwanzoni, Moseka alikuwa na hofu kubwa

Hatimaye Moseka alifanikiwa kujichoma sindano

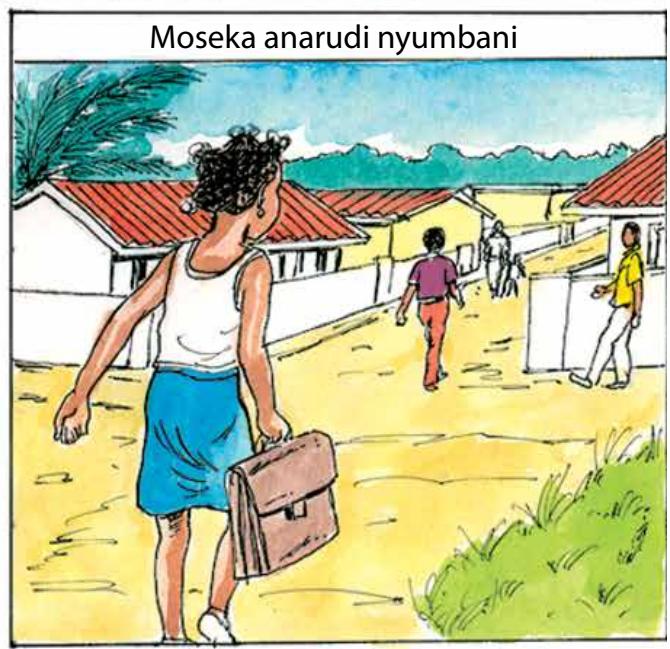

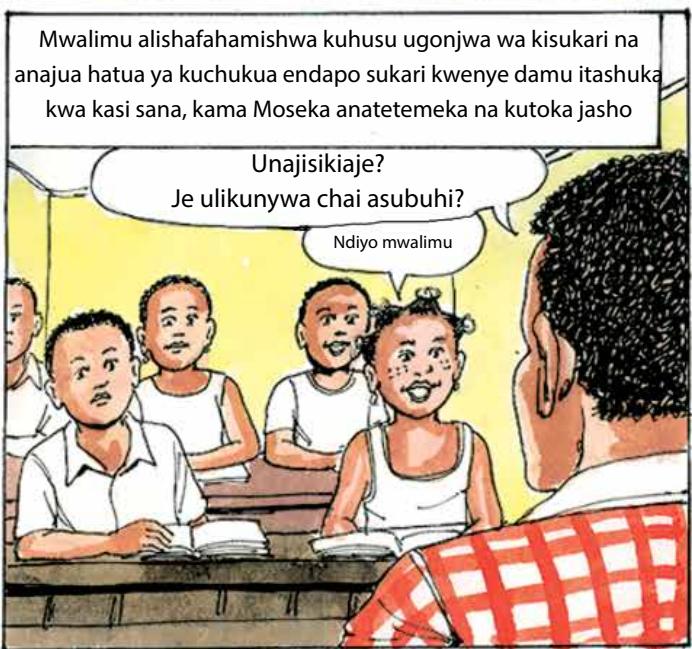

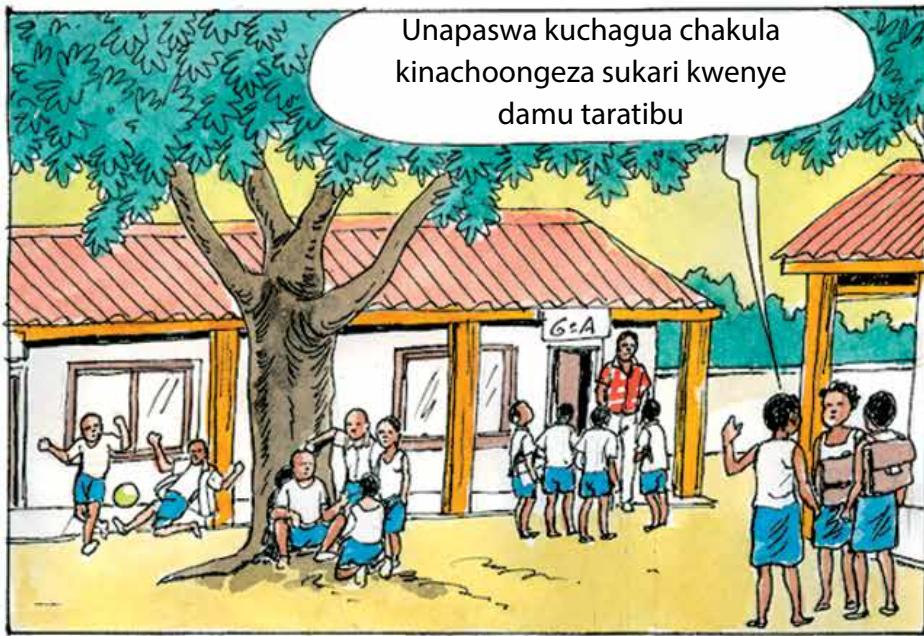

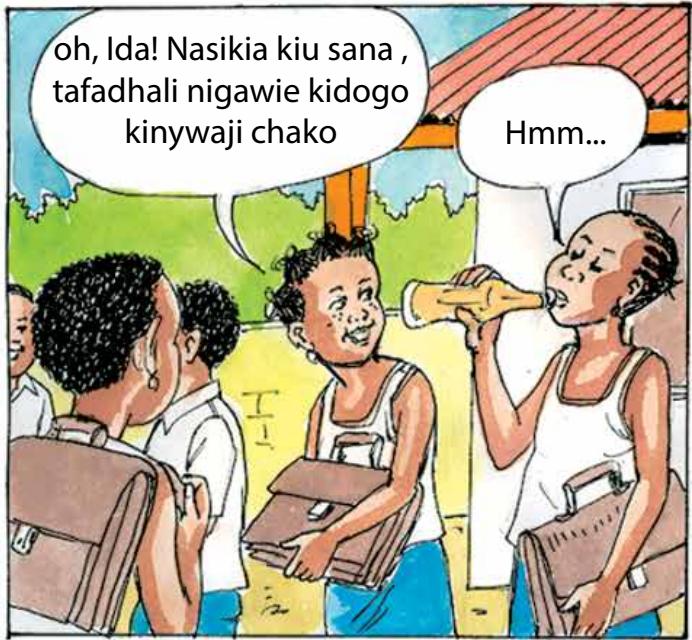

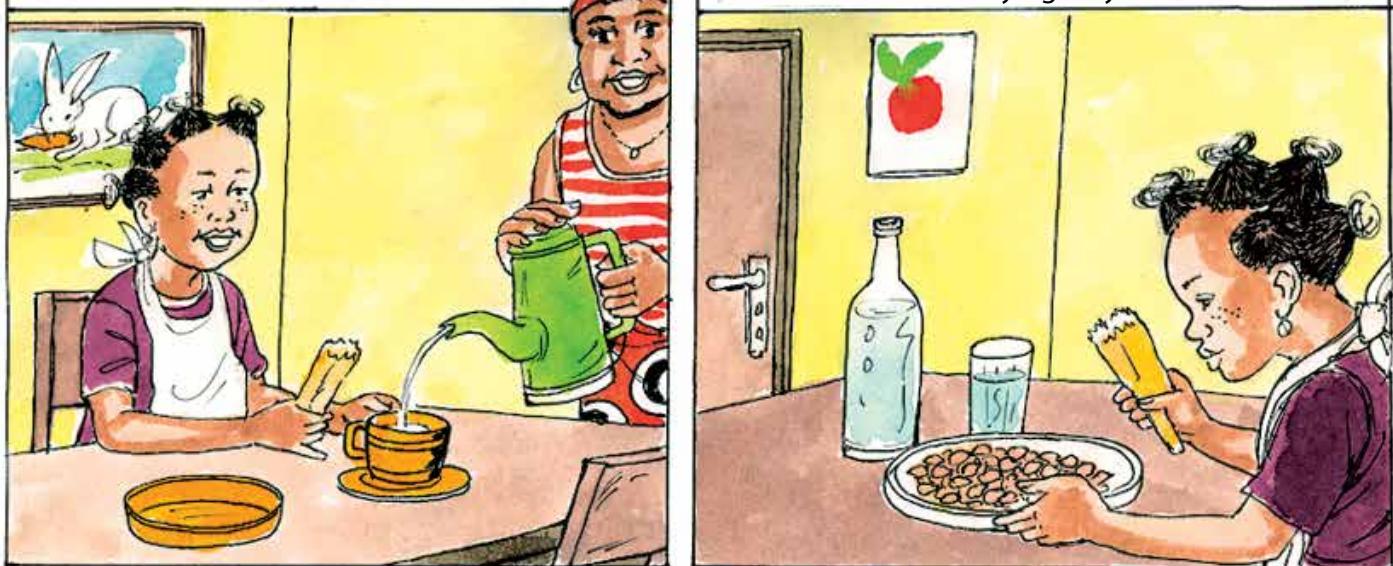

Baada ya
kutoka
hospitali,
Moseka
anajisikia
mzima kabisa
na anarejea
shuleni

Moseka anajiamini, anawaelezea marafiki zake kuwa anaweza
kujichoma mwenyewe sindano ya insulini

Mchana anabadilisha chakula chake mara kwa mara - chakula jamii ya muhogo pamoja na mboga za majani, na samaki wa kuchoma au mshikaki

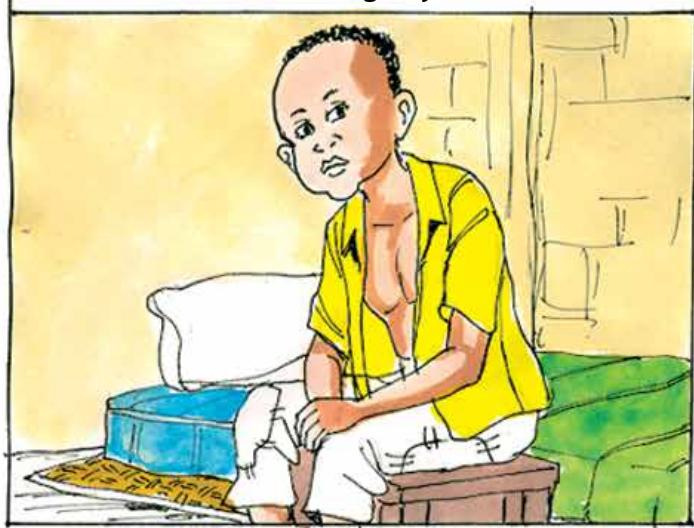

Ikikaribia saa 10 jioni anakula matunda, biskuti au andazi

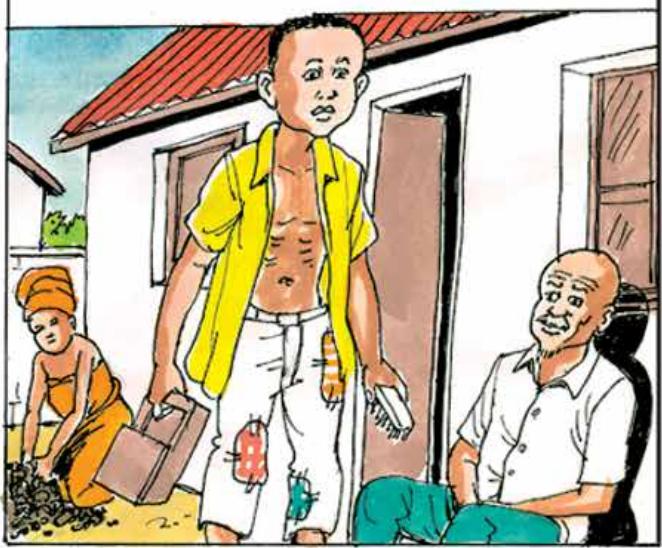

Jioni,
anachoma
sindano ya
pili ya
insulini
kabla ya
kula
pamoja na
familia
yake

Sidi anaishi kwenye nyumba inayotazamana na
ya kina Moseka. Anafaya kazi ya kupiga
viatu rangi mjini

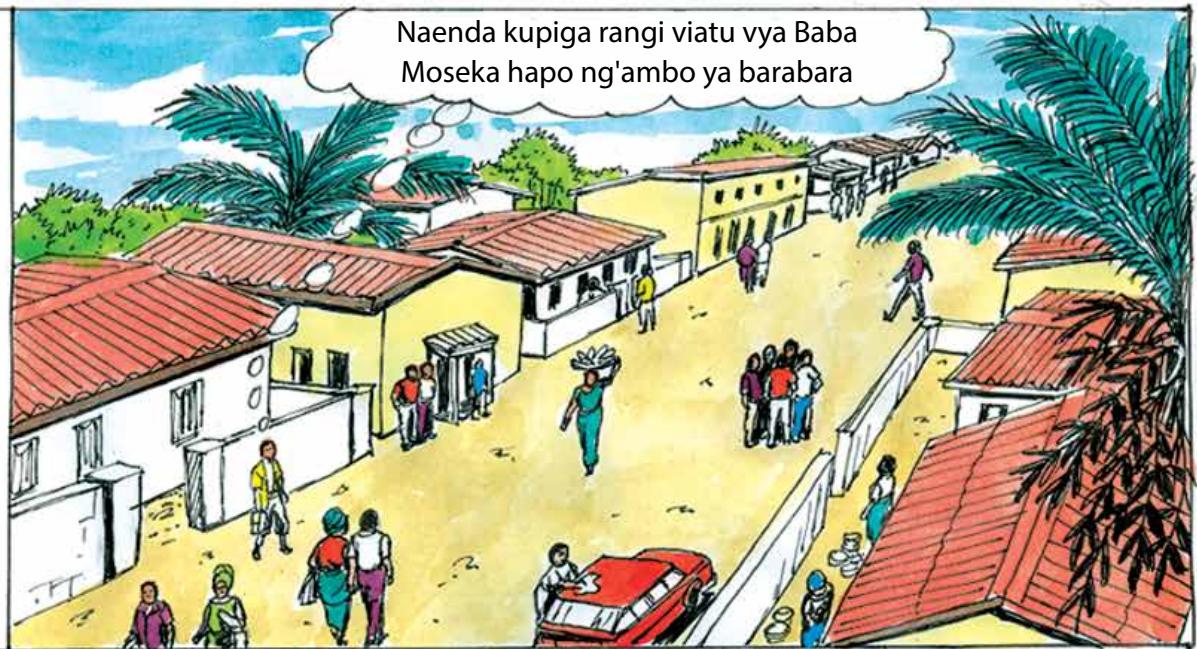

Baba yake hana ajira; mama yake anauza mkaa
kupata hela ya kutunza familia

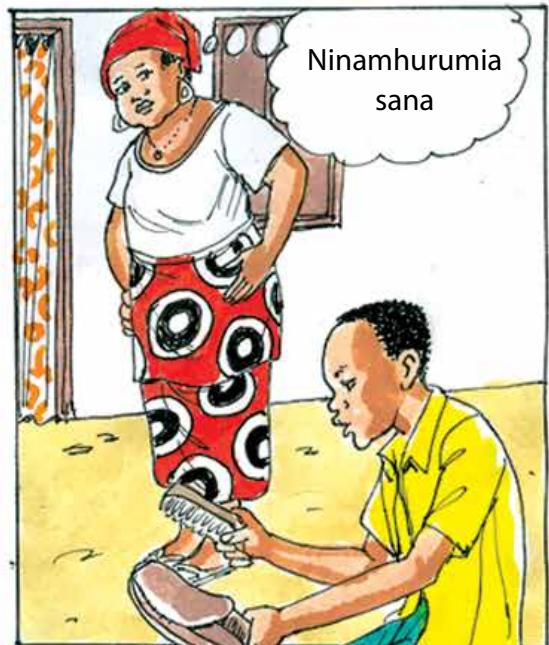

Kila siku
asubuhi Sidi
anaenda
kupiga rangi
viatu vya baba
yake Moseka.
Baba Moseka
anamhurumia
kijana huyu
na anamlipa
vizuri

Naenda kupiga rangi viatu vya Baba
Moseka hapo ng'ambo ya barabara

Sidi, viatu hivi hapa,
tafadhalii ving'arishe

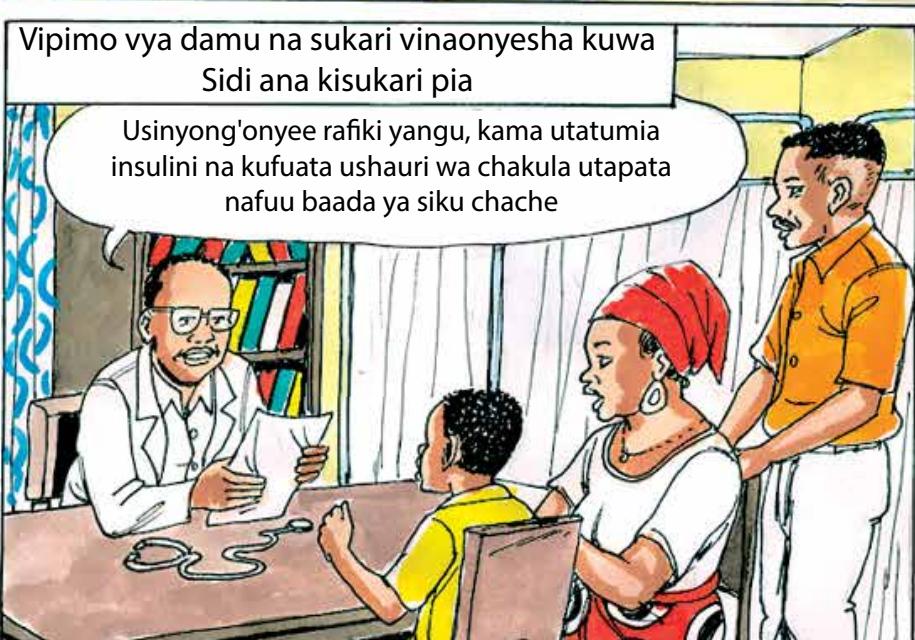

Ninamhurumia
sana

Hata mimi nilitaka
kukuambia hivyo: ana
dalili kama za mwanetu.
Inawezekana ikawa ni
kisukari pia

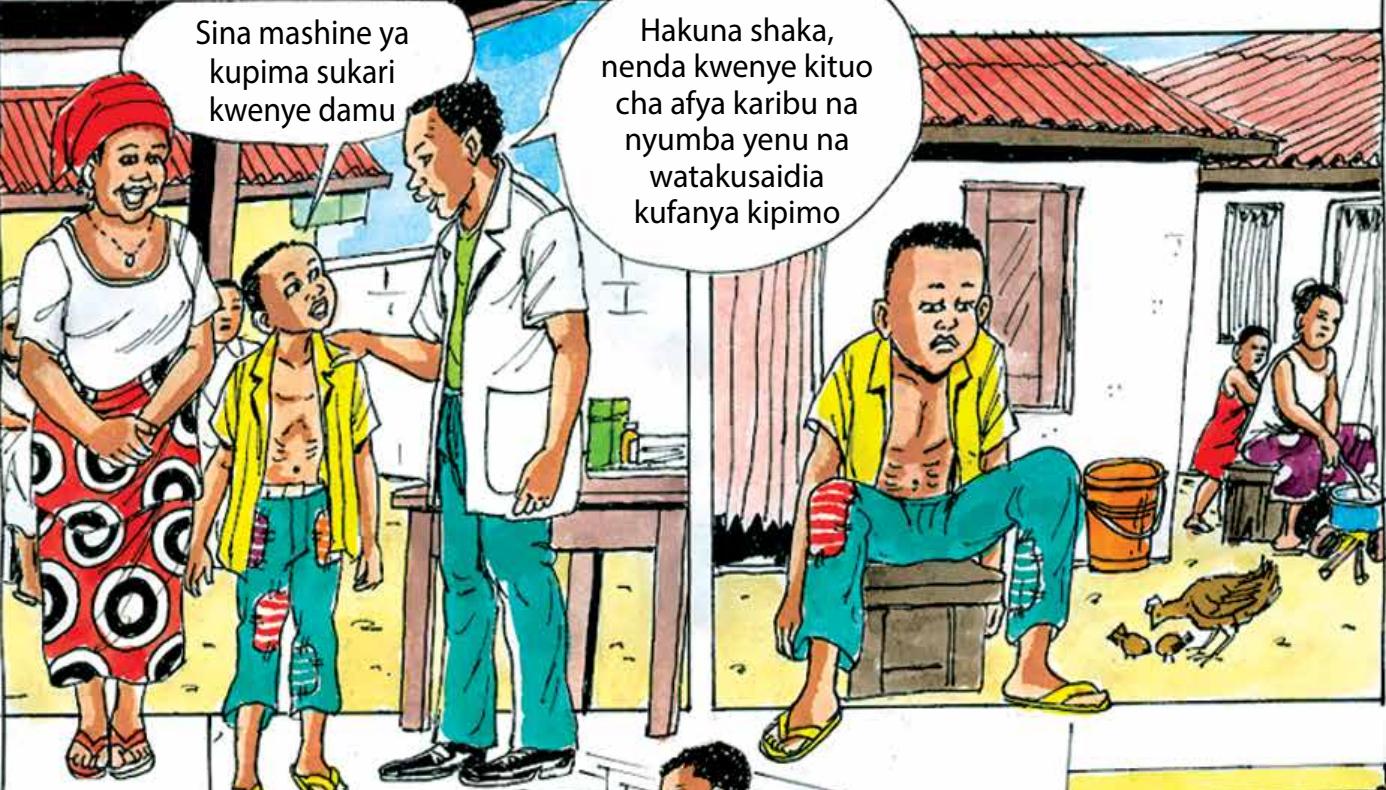

Sidi anahudhuria "shule ya kisukari" na kujifunza namna ya kujichoma sindano ya insulini, na kupima sukari kwenye mkojo

Lakini Sidi bado anakabiliwa na tatizo la kupata chakula cha kutosha kwa wakati ili aweze kuchoma insulini

Sina mashine ya
kupima sukari
kwenye damu

Hakuna shaka,
nenda kwenye kituo
cha afya karibu na
nyumba yenu na
watakusaidia
kufanya kipimo

Ana kazi mjini,
na ni lazima
atafute pesa.
Analazimika
kununua
chakula
mchana

Ninasikia njaa

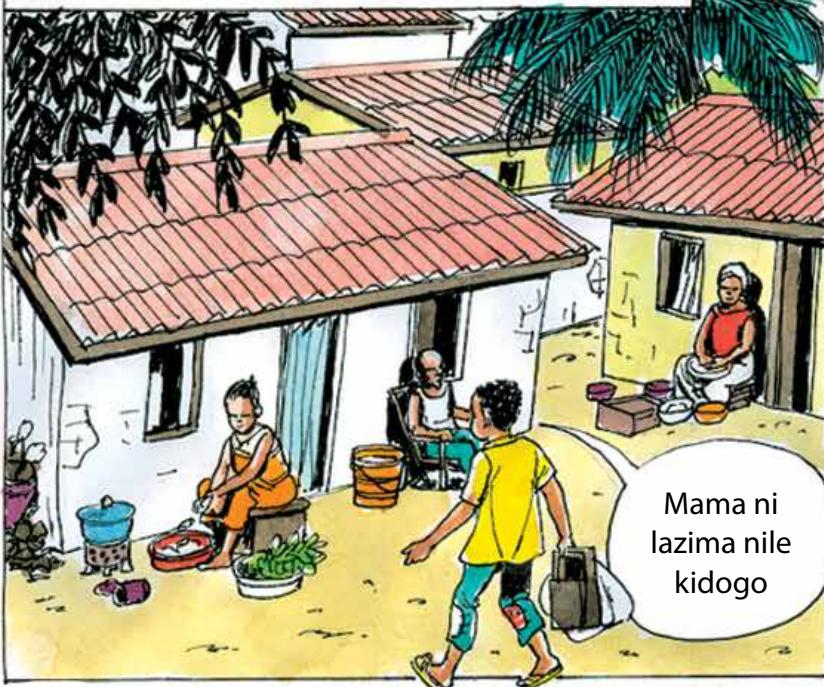

Hatimaye mchana umefika...

Namshukuru
Mungu nina hela za
kutosha kununua
mkate na karanga

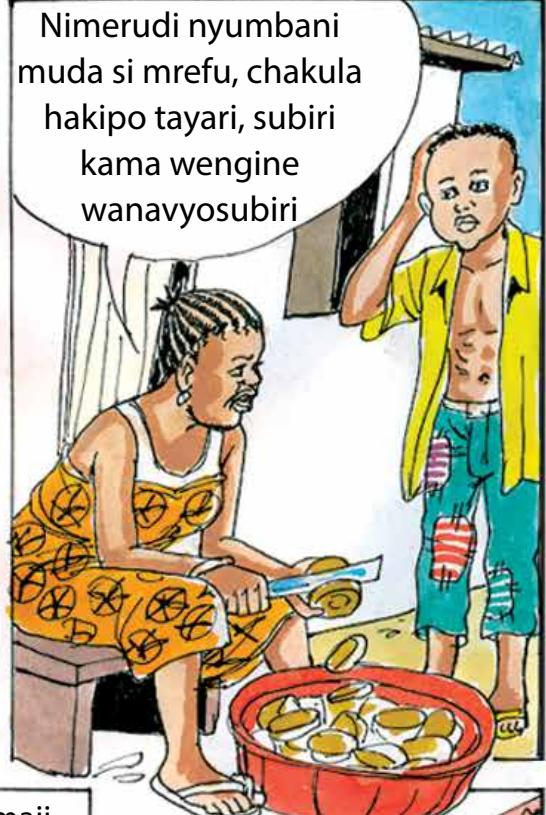

Sidi
anachoma
insulini na
kula mlo
wake wa
mchana

Kwenye saa 10 jioni Sidi anaenda nyumbani, anasikia njaa sana lakini chakula hakipo tayari

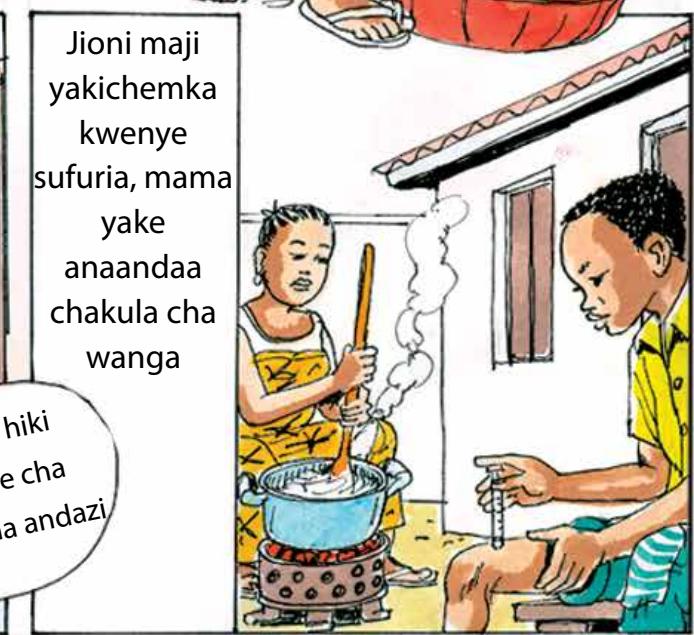

Nimerudi nyumbani muda si mrefu, chakula hakipo tayari, subiri kama wengine wanavyosubiri

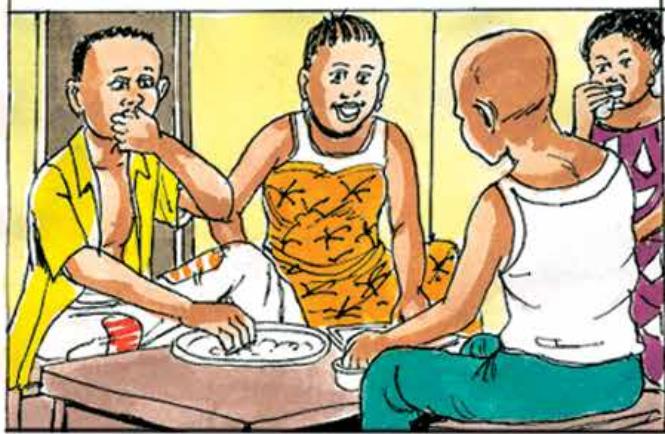

Kwa bahati nzuri Sidi anapata msaada kutok kwa Mama yake Moseka

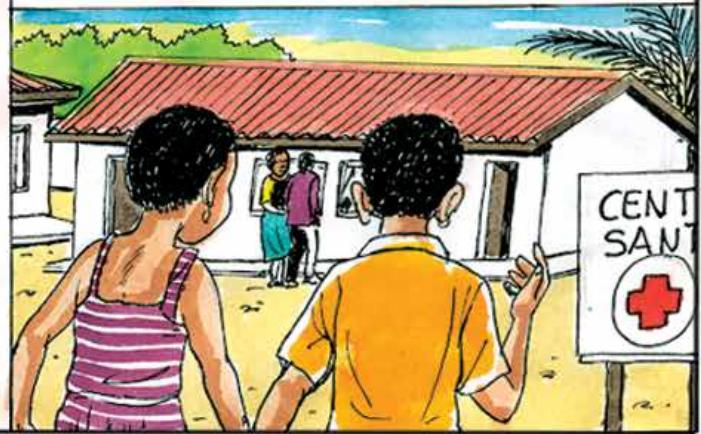

Jioni maji yakichemka kwenye sufuria, mama yake anaandaa chakula cha wanga

Sidi ananawa mikono yake na kujichoma insulini, halafu familia nzima inakula pamoja

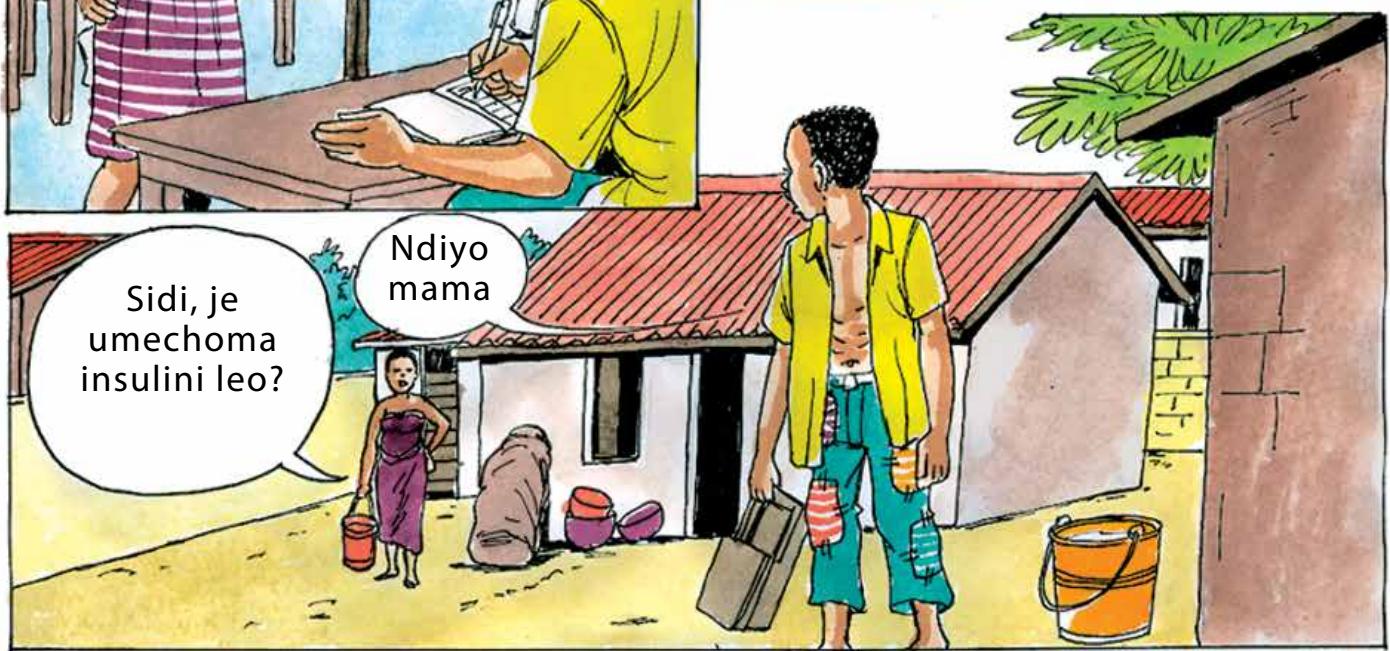

Moseka na Sidi sasa ni marafiki, wanaenda pamoja kwenye kituo cha afya kupima afya zao mara kwa mara

Moseka anatoa kijitabu chake cha kumbukumbu za ugonjwa, lakini Sidi alisahahu kuandika tiba yake na majibu yake. Anakaa chini na kujaribu kuandika kila kitu kilichotokea ndani ya wiki 2! Moseka anamkosoa!

Siku moja, Sidi anaamka asubuhi lakini anashindwa kabisa kupata mkate kwa ajili ya kifungua kinywa. Na.....

Sidi ana njaa sana na kujisikia kuumwa

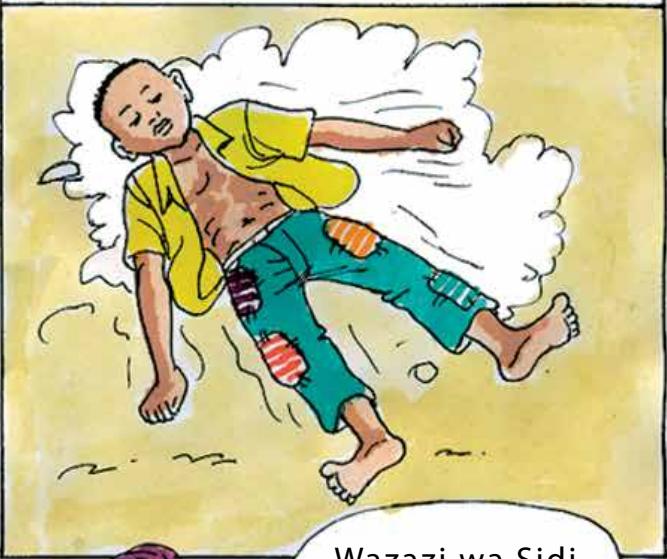

Anatoka sana jasho, ingawa hakuna joto. Anaona kizunguzungu na anatetemeka

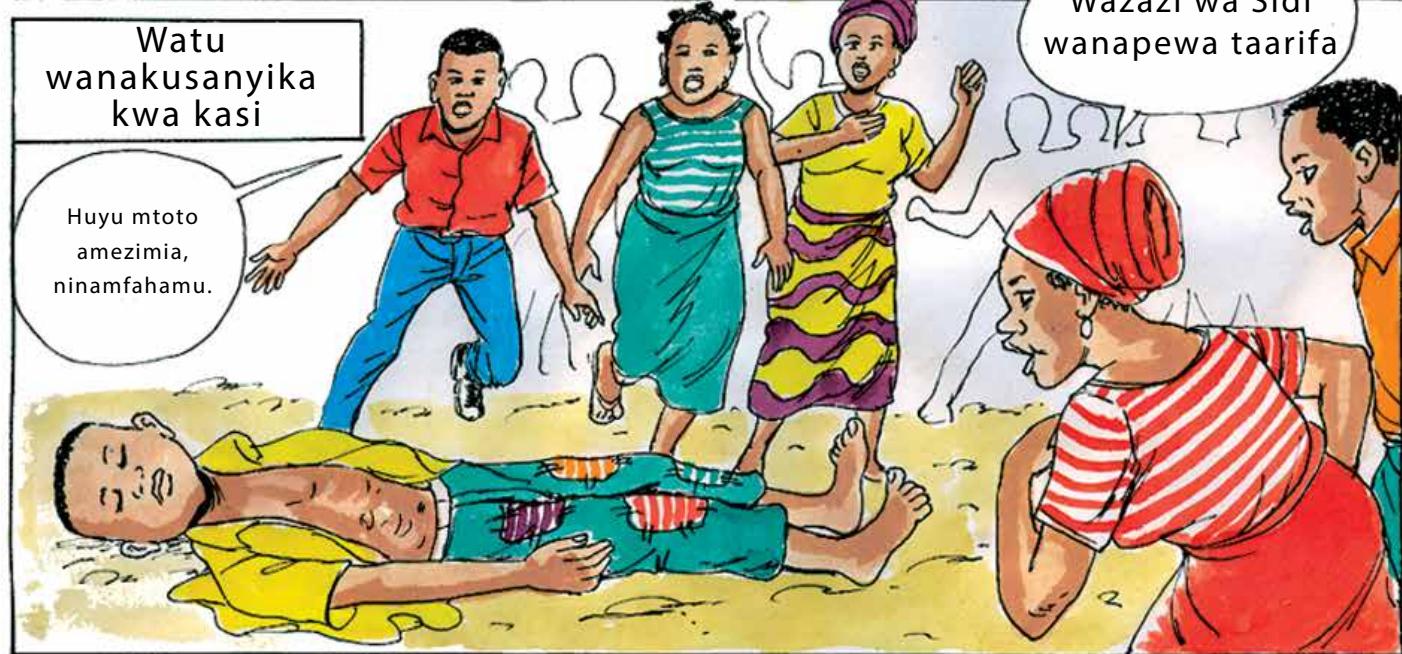

Ghafla anaanguka chini

Anapatwa na degege na watu wanakusanyika kujua kuna nini

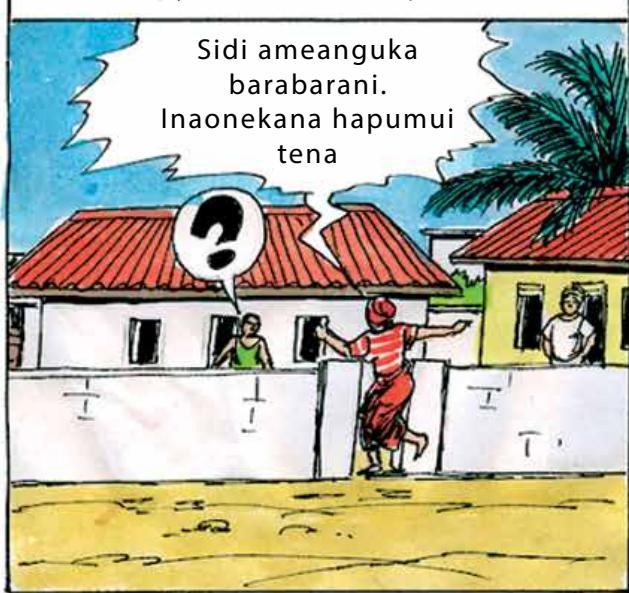

Watu wanakusanyika kwa kasi

Wazazi wa Sidi wanapewa taarifa

Baba yake Sidi anakuja haraka

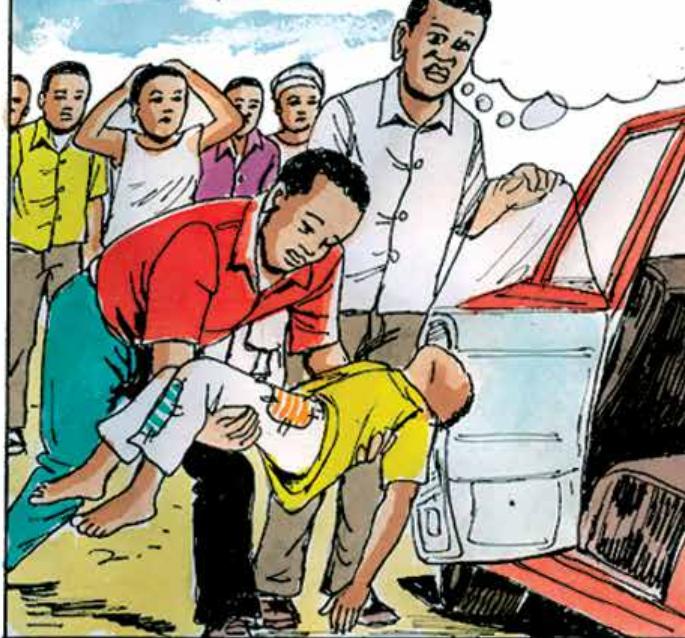

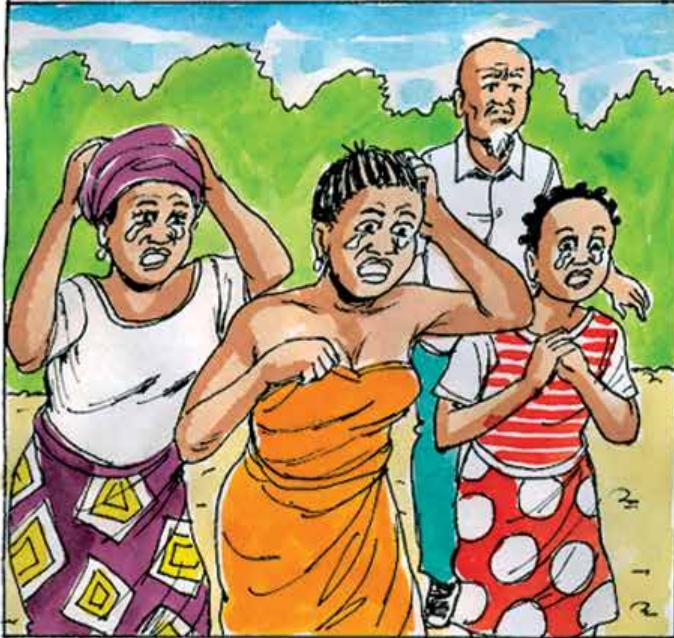

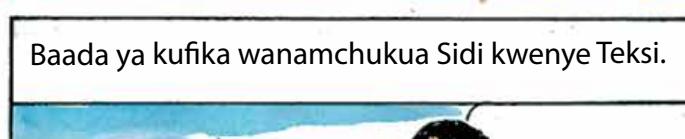

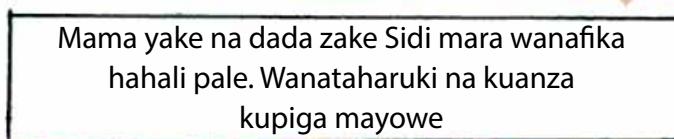

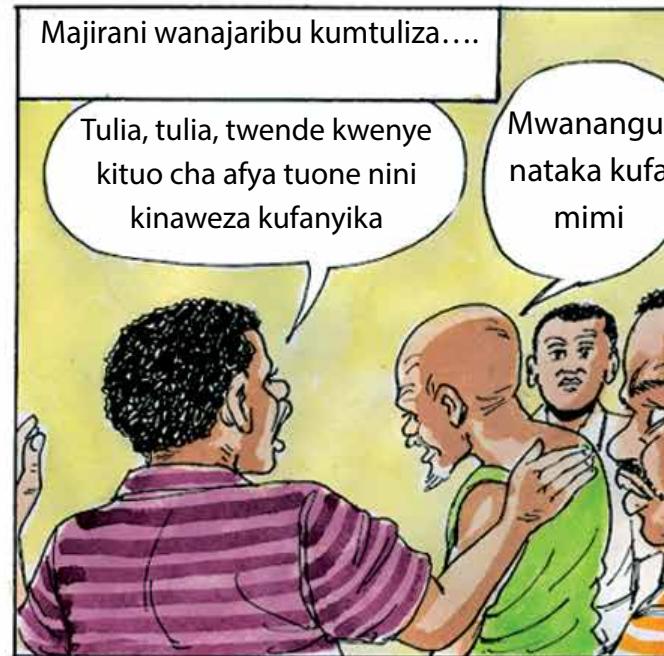

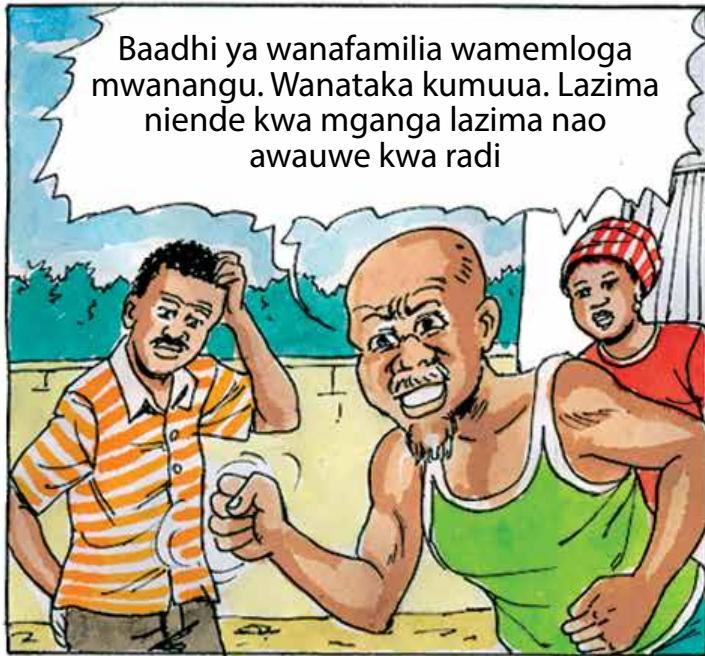

Sidi ameanguka
barabarani.
Inaonekana hapumui
tena

We Mama, tafadhali
usiniambie
mwanangu amefariki,
siwezi kukubali

Siwezi kujua,
twende tukaone
kilichoteka.

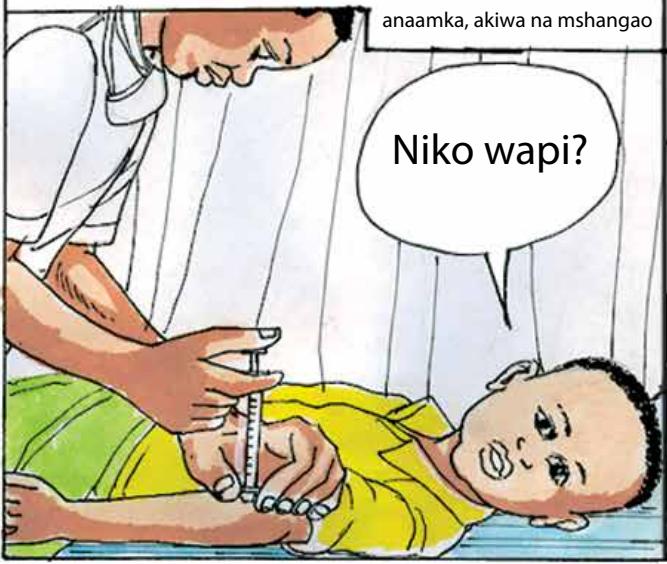

Baada ya kufika kwenye kituo cha afya, nesi anaona kijitabu cha kumbukumbu za ugonjwa cha Sidi, na ndugu zake wanaeleza kuwa ana kisukari na anatumia insulinini. Nesi anabaini tatizo la upungufu wa sukari kwenye damu.

Ngoja tumchome sindano yenyeye sukari ya kiwango cha asilimia 50% kuititia mshipa wa damu. Baada ya dakika chache Sidi anaamka, akiwa na mshangao

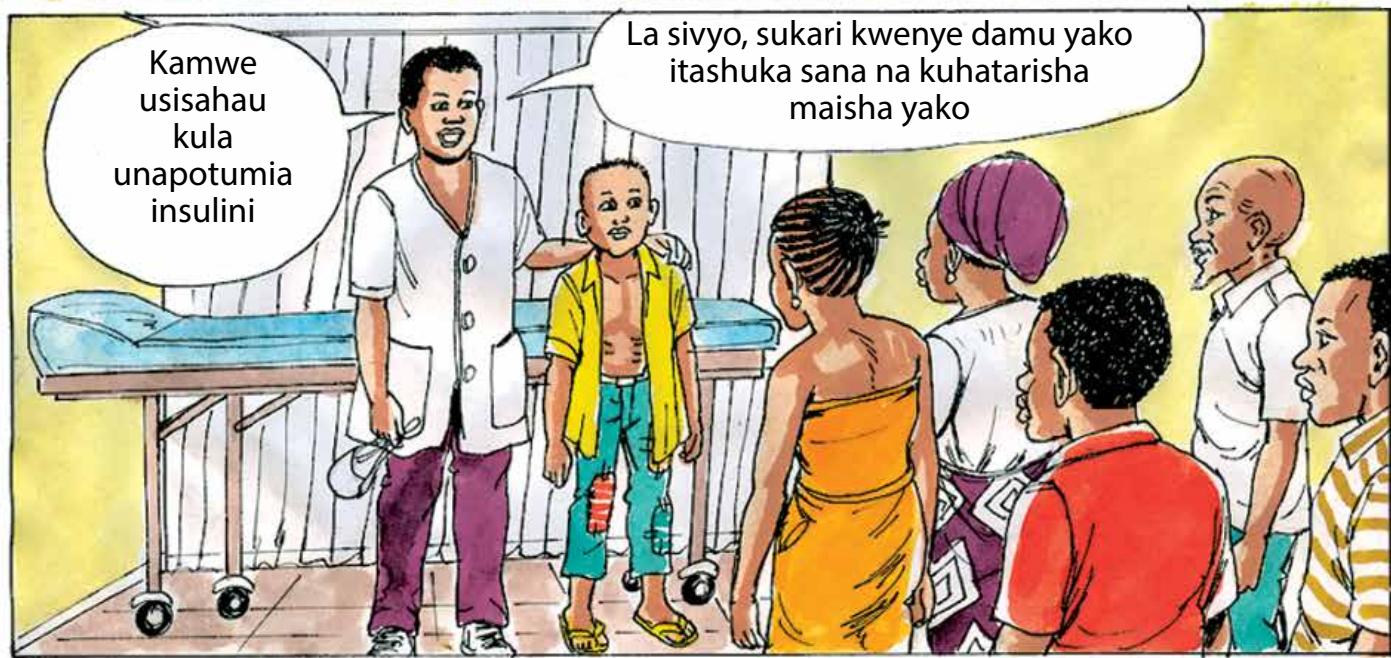

Mshangao na furaha kutoka kwa ndugu zake

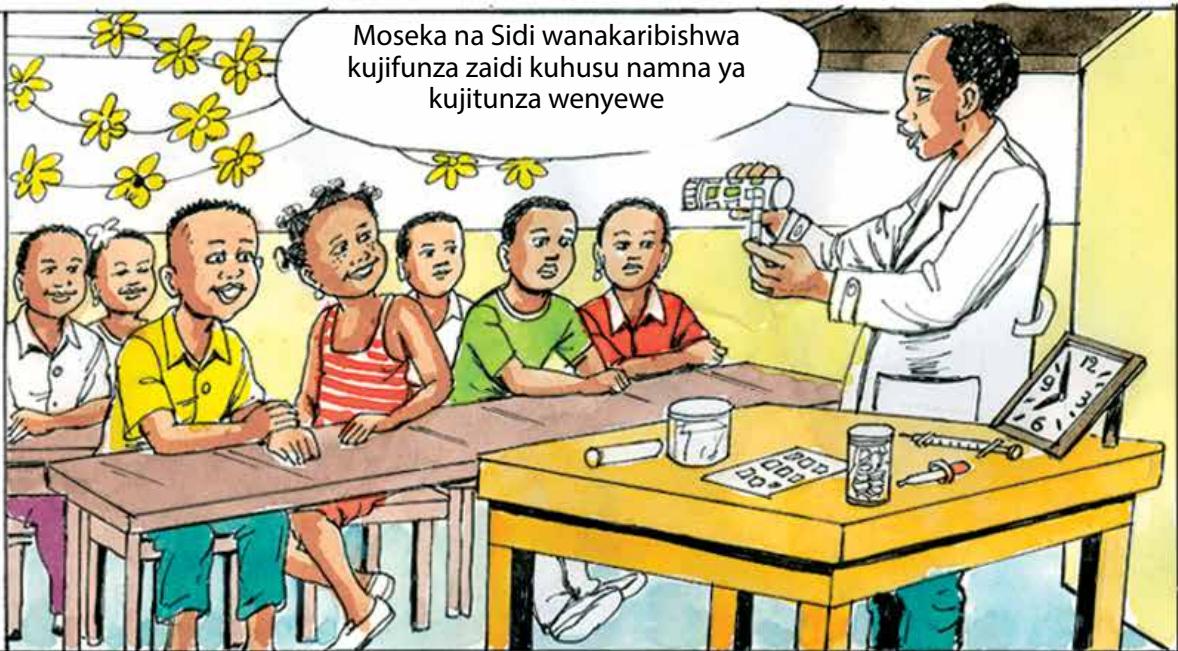

Kamwe usisahau kula unapotumia insulinini

La sivyo, sukari kwenye damu yako itashuka sana na kuhatarisha maisha yako

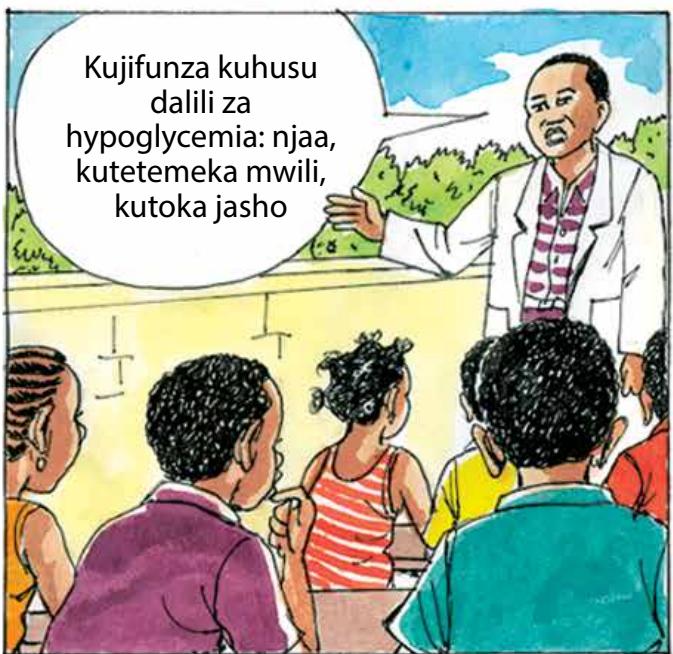

Wiki tatu
baadaye
kuna
sherehe
kwa vijana
wadogo
wenye
kisukari

Moseka na Sidi wanakaribishwa
kujifunza zaidi kuhusu namna ya
kujitanza wenyewe

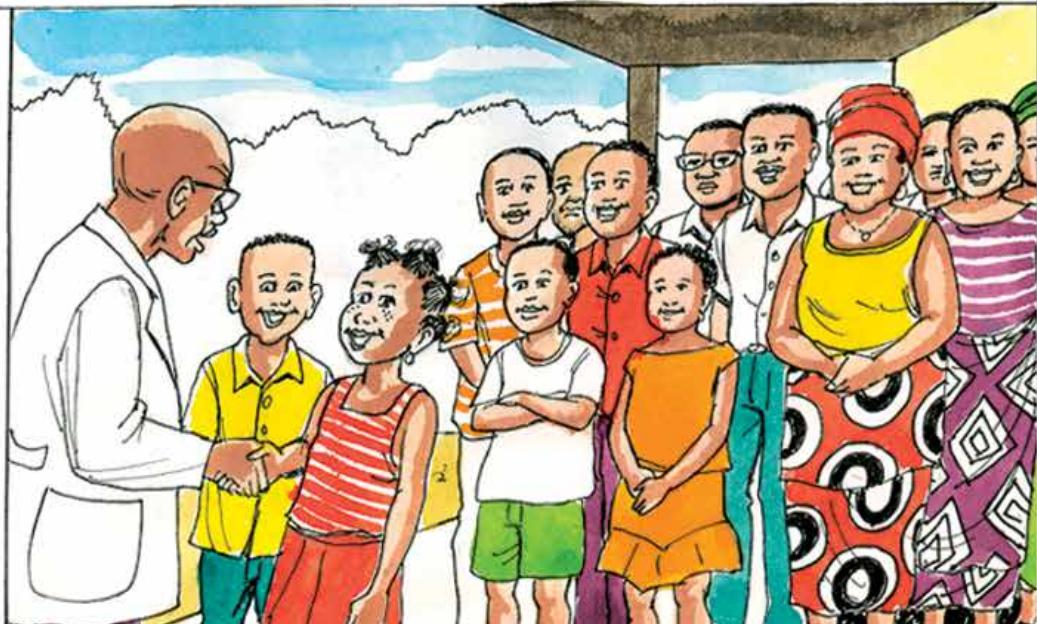

Kujifunza kuhusu
dalili za
hypoglycemia: njaa,
kutetemeka mwili,
kutoka jasho

Na dalili za kuzidi sukari kwenye
damu: kukauka midomo, kukojoa
sana, kiu, na kupungua uzito.

Moseka na Sidi
hawako peke yao.
Vijana wenyewe umri
mkubwa zaidi
wanaelezea namna
walivyoweza
kujihudumia kwa
miaka kadhaa. Ni
wanachama wa
chama cha wagonjwa
wa sehemu hiyo.
Wazazi nao
wanasaidiana mara
kwa mara

Moseka na Sidi wanajifunza upesi namna kisukari kinavyowaathiri na namna kitakavyoleta mabadiliko mengi maishani mwao.

Wenyewe pamoja na wazazi wao walikua na hofu mwanzoni. Lakini taratibu wamejifunza namna ya kuhakikisha kuwa wanakula katika muda uliopangwa, kujichoma insulini kwa ujasiri, na kwa ustadi wanapima kiwango cha sukari kwenye mkojo na damu.

Timu ya kutoa huduma ya madaktari na manesi wanawasaidia kurudia maisha yao ya kawaida, ambapo wanaweza kudhibiti kisukari chao.

Tunatumaini kuwa vijana wenyе kisukari, wazazi, ndugu na marafiki zao, pamoja na walimu na wanafunzi wenzao mashulenі watasoma hiki kijarida picha. Utajifunza mambo mengi yenye msaada kuhusu nini hasa maana ya kuwa na kisukari, na namna ya kumhudumia mtu mwenye kisukari.

Vyama vyा wenyе Kisukari viро karibu kwenye kila nchi. Jiunge uwe mwanachama ili muweze kusaidiana.

Kijarida picha hiki kimeandaliwa nchini Jamhuri ya Kidemokrasia ya Kongo. Barua pepe: guymbenza@yahoo.fr - mdcdiabrdc@yahoo.fr.
