*This syllabus is the property of REB and credit must be provided to author and source of the document when the content is quoted.*

## **FOREWORD**

The Rwanda Education Board is honoured to make available syllabuses that serve as both official documents and as a guide to competence-based teaching and learning. These syllabuses ensure consistency and coherence in the delivery of quality education across all levels of general education in Rwandan schools.

The Rwandan education philosophy aims to ensure that young people at every level of education achieve their full potential in terms of relevant knowledge, skills and appropriate attitudes. This will prepare them to be well integrated into society and maximise employment opportunities.

In line with efforts to improve the quality of education, the government of Rwanda emphasises the importance of aligning the syllabus, teaching and learning and assessment approaches in order to ensure that the system is producing the kind of citizens the country needs. Many factors influence what children are taught, how well they learn and the competences they acquire, in particular the relevance of the syllabus, the quality of teachers' pedagogical approaches, the assessment strategies and the instructional materials available. The ambition to develop a knowledge-based society and the growth of regional and global competition in the jobs market has necessitated the shift to a competence-based syllabus. With the help of the teachers, whose role is central to the success of the syllabus, learners will gain appropriate skills and be able to apply what they have learned in real life situations. Hence they will make a difference not only to their own lives but also to the success of the nation.

I wish to sincerely extend my appreciation to the people who contributed to the development of this document, particularly the REB and its staff who organised the whole process from its inception. Special appreciation goes to the development partners who supported the exercise throughout. Any comments and contribution would be welcome for improvement of this syllabus.

**GASANA I. Janvier**

Director General REB

## **ACKNOWLEDGEMENT**

I wish to sincerely extend my special appreciation to the people who played a major role in the development of this syllabus. It would not have been successful without the participation of a range of different education stakeholders and the financial support from various donors to whom I would like to express my deepest gratitude.

My thanks firstly goes to the staff of the Rwanda Education Board who were involved in the conception and writing of this syllabus. I would also like to extend my appreciation to all of the teachers from pre-primary to university level, whose efforts during the conception were extremely valuable.

I owe gratitude to the different education partners such as UNICEF, UNFPA, DFID and Access to Finance Rwanda for their financial and technical support.

We also value the contribution of other educational partner organisations such as CNLG, AEGIS Trust, Itorero ry'Igihugu, Center for Gender Studies, Gender Monitoring Office, National Unity and Reconciliation Commission, RBS, REMA, Handicap International, Wellspring Foundation, Right to Play, MEDISAR, EDC/L3, EDC/Akazi Kanoze, Save the Children, Faith Based Organisations, WDA, MINECOFIN and local and international consultants. Their respective initiatives, cooperation and support significantly contributed to the successful production of this syllabus by the Curriculum and Pedagogical Material Production Department (CPMD).

**Dr. Joyce Musabe,**

Head of CPMD

## **THE LIST OF PARTICIPANTS WHO WERE INVOLVED IN THE DEVELOPMENT OF THE SYLLABUS**

### **Rwanda Education Board**

- Dr. Joyce MUSABE: Head of CPMD, as a Facilitator
- Joseph RUTAKAMIZE: Director of science unit.
- Felecian Nkubana RUGENGAMANZI: Curriculum specialist, Biology.
- Anaclet MUHAYA: Biology specialist, Examiner.
- Anathalie NYIRANDAGIJIMANA: Pedagogical Norms specialist

### **Teachers' and Lecturers**

- François Gakwerere: University of Rwanda College of Education.
- Benson NKWASIBWE: Biology teacher at Gashora girls' academy of science and technology, Bugesera District.
- Gustave Mukombe MATENDA: Biology teacher at Kagarama secondary school, Kicukiro District.
- John AGUMA: Biology teacher at Kayonza modern secondary school, Kayonza District.
- Patrick ABIDRA: Biology teacher at Rivera high school, Gasabo District.
- Stella AJANGA: Biology teacher at Nu vision secondary school, Gasabo District.

### **Quality assurer**

Dr. Martin Braund.

## **INTRODUCTION**

### **1.1. Background to the curriculum review**

Vision 2020 and other recent policies of the Rwandan Government emphasise Rwanda's ambition to become a knowledge based and technology led economy. These policies stress the need for the generation, dissemination and acquisition of scientific skills and technological innovations. The integration of these skills into the social and economic development of Rwanda is critical if this vision is to be realised.

Findings from the recent review of the existing biology syllabus (2013) highlighted a number of strengths and weaknesses. The review noted that the existing syllabus does not sufficiently emphasise the skills needed by both today's society and labour market and that the syllabus dwells more on knowledge and very little on the skills, attitudes and values. Given this, the development of the new syllabus has focused on rectifying these identified shortcomings.

The underlying principle behind the biology syllabus review process was to ensure that the syllabus is responsive to the needs of the learner and to shift from objective and knowledge based learning to include competence-based learning. The emphasis of the review has been on building more skills and competences and streamlining the coherence of the existing content by benchmarking against best practice syllabuses.

The new biology syllabus guides the interaction between the teacher and the learner in the learning processes and highlights the essential practical skills and competences a learner should acquire during and at the end of each unit of learning.

## **1.2. Rationale of teaching and learning biology**

Biology is the study of life and it plays a crucial role in our everyday existence. Biology has many applications, both in the natural environment and in health and education. Studying biology develops an understanding of living systems and of how to apply learning in direct ways to maintain the health of humans, animals and plants. Biology enables us to understand the relationships between living organisms and what is beneficial and what is harmful. Technological advances in new areas, such as DNA and genetics, have made this varied discipline more exciting than ever.

### **1.2.1. Biology and society**

Biology is one of the natural science subjects and is an important discipline that has contributed significantly to the global environment. Biologists are at the forefront of genetic engineering and health transformation and a number of major developments in these areas are due to the discoveries of biologists. The work of biologists have led to new technologies in the production of small scale and industrial products that are beneficial to man and the environment. Application of the knowledge of biology is evident in medicine, pharmacy, agriculture, fisheries and food processing industries. In particular, biology has played a role in the harmonisation of man's needs with the conservation of nature and the environment.

Biology plays a role in the Rwandan ambition to:

- Develop a competence-based society.
- Promote science and technology competitiveness in regional and global job markets.
- Address the issues of lack of appropriate skills in the Rwandan education system.

### 1.2.2. Biology and learners

Biology is a worthwhile subject because it prepares students for the real world of work through career pathways such as medicine, agriculture, pharmacy, food science, environmental studies and many others. Biology provides skills that guide the construction of theories and laws that help to explain natural phenomenon and manage man and the environment. It provides answers for the problems faced by our modern society by empowering students to be creative, innovative and to use independent approaches to solve problems in unfamiliar situations.

### 1.2.3. Competences

A competence is the ability to perform a particular task successfully, resulting from having gained an appropriate combination of knowledge, skills and attitudes. The national policy documents, based on the national aspirations, identify 'Basic Competences' alongside the 'Generic Competences' that will develop higher order thinking skills. Basic Competences are addressed in the stated **broad subject competences** and in objectives highlighted on a year on year basis and in each of the units of learning. The selection of types of learning activities must focus on how learners are able to demonstrate such competences throughout and at the end of the learning process. A Generic Competence is a competence that is not specific to a particular subject or situation. Generic Competences are transferrable and applicable to a range of subjects and situations including employment.

The generic competencies that must be emphasized and reflected in the learning process are briefly described below and teachers will ensure that learners are exposed to tasks that help the learners acquire the skills.

## **Generic competences:**

**Critical thinking and problem solving skills:** The acquisition of such skills will help learners think imaginatively and broadly to evaluate and find solutions to problems encountered in all situations.

**Creativity and innovation:** The acquisition of such skills will help learners take initiative and use imagination beyond the knowledge provided to generate new ideas and construct new concepts.

**Research:** This will help learners find answers to questions based on existing information and concepts and to explain phenomena based on findings from information gathered.

**Communication in official languages:** Teachers, irrespective of not being teachers of language, will ensure the proper use of the language of instruction by learners. This will help learners communicate clearly and confidently and convey ideas effectively through speaking and writing and use the correct language structure and relevant vocabulary..

**Cooperation, inter personal management and life skills:** This will help the learner to cooperate with others in a team in whatever tasks are assigned and to practice positive ethical moral values and respect for the rights, feelings and views of others. Learners will perform practical activities related to environmental conservation and protection. They will also advocate for personal, family and community health, hygiene and nutrition and respond creatively to the variety of challenges encountered in life.

**Lifelong learning:** The acquisition of such skills will help learners to update their knowledge and skills with minimum external support and to cope with the evolution of advances in knowledge for personal fulfilment in areas that need improvement and development.

## **Broad biology syllabus competences**

The syllabus competences listed below describe the educational purposes of a course based on this syllabus. It outlines the educational context in which the syllabus content should be viewed. These competences are the same for all learners and are not listed in order of priority. Some of these competences may be delivered by the use of suitable local, international or historical examples and applications, or through collaborative experimental work.

Learners should be able to:

1. Stimulate learners and create a sustained interest in biology so that the study of the subject is enjoyable and satisfying.
2. Provide, through well-designed studies of experimental and practical biological science, a worthwhile educational experience for all learners, whether or not they go on to study science beyond this level. In particular, it should enable them to:
  - Become confident citizens in a technological world, with an informed interest in scientific matters.
  - Recognise the usefulness, and limitations, of scientific method and its application in other subjects and in everyday life.
  - Be suitably prepared for studies in biological science beyond the Rwandan Advanced Level, in further or higher education, and for professional courses.
3. Develop abilities and skills that:
  - Are relevant to the study and practice of biological science.
  - Are useful in everyday life.
  - Encourage efficient and safe practice.
  - Encourage effective communication using universal scientific conventions.
  - Protect themselves against common illnesses and fatal diseases including HIV/AIDS and malaria.
4. Develop attitudes and values relevant to biological science such as:
  - A concern for accuracy and precision, objectivity, integrity, a spirit of enquiry, initiative, and inventiveness.

- Advocate for personal, family and community health, hygiene and nutrition.
  - Peace and tolerance, justice, respect for others and for human rights, solidarity and democracy, patriotism, hard work, commitment, resilience and dignity.
5. Stimulate interest in, and care for, the local and global environment and help learners to understand the need for conservation.
  6. Promote an awareness that:
    - Scientific theories and methods have developed, and continue to develop, as a result of groups and individuals working together, and that biological science overcomes national boundaries.
    - The study and practice of biology is affected and limited by social, economic, technological, ethical and cultural factors.
    - The applications of biological science may be both helpful and harmful to the individual and the community.
    - Demonstrate awareness and concern for the environment, conservation and sustainability and act accordingly.
    - The use of information technology is important for communication, as an aid to experiments and as a tool for interpreting experimental and theoretical results.
  7. Use and experiment with a range of scientific and technological tools and equipment and draw appropriate conclusions.
  8. Use ICT skills effectively to enhance learning and communication.

### **Biology and developing competences**

These basic competences alongside the generic competences are stated in such way that will develop higher order thinking skills and will help subject learning and the application of what has been learnt in real life situations. Through experimentation, observations and presentation of information during the learning process, the learner develops not only deductive and inductive skills but also communication, critical thinking and problem solving skills in trying to make inferences and conclusions.

The manipulation of numerical and other data, doing practical experiments and undertaking project assignments involves not only analytical and problem solving skills, but also innovation, creativity and research. Group work and cooperative learning of biology promote interpersonal relations and teamwork.

## **2. PEDAGOGICAL APPROACHES**

Learners learn best when they are actively involved in the learning process through a high degree of participation, contribution and production.

At the same time, each learner is an individual with their own needs, pace of learning, experiences and abilities. Teaching strategies must therefore be varied but flexible within well-structured sequences of lessons. Learner-centred education does not mean that the teacher no longer has responsibility for seeing that learning takes place.

### **2.1. Role of the learner**

The activities of the learner are indicated against each learning unit and they all reflect appropriate engagement of the learner in the learning process.

The teaching and learning processes will be tailored towards creating a learner friendly environment based on the learner's capabilities, needs, experience and interests.

The learning activities will be organised in a way that encourages learners to construct knowledge either individually or in groups in an active and engaging way.

Learners work on one unit competence at a time in the form of concrete units with specific learning outcomes broken down into knowledge, skills and attitude.

In practical lessons learners will work in groups where the availability of the apparatus will not permit working individually. They will also be encouraged to do simple project work individually.

## **2.2. Role of the teacher**

The change to a competence-based curriculum is about transforming learning and ensuring that learning is deep, enjoyable and habit-forming.

Teachers ought to shift from the traditional method of instruction to that of a facilitator in order to value the individual needs and expectations of learners.

The teacher must identify the needs of the learners, the nature of the learning to be done, and the means to shape the learning experiences accordingly.

A Teacher's role is to organise the learners, both in the classroom or outside, and engage them through participatory and interactive methods through the learning processes as either individuals, in pairs or in groups. This ensures that learning is personalised, active, participative, and co-operative.

The teacher will design and introduce tasks to the class to perform or for immediate discussion. The role of the teacher will be to guide the learners in constructing their own knowledge.

Learners are taught how to use textbooks and other resource materials in different ways for example to search for and make use of information in writing their own notes.

The teacher must select and develop appropriate materials such as teaching models, or charts, for the learners to use in their work.

In practical lessons, the teacher will first demonstrate the handling of the apparatus and then show the way the experiment should be carried out before exposing to the learners, as the task that can be dangerous if not performed correctly.

The teacher ought to demonstrate how to mix the reagents in the correct proportions before leaving the learners to do it on their own.

The teacher must devise remedial strategies, both in and outside the classroom, to address the issue of low achievers and those with learning difficulties. The teacher must ensure these learners keep pace with the rest of the group in acquiring the required competences.

### **2.3. Special needs education and inclusive approach**

All Rwandans have the right to access education regardless of their different needs. The underpinnings of this provision would naturally hold that all citizens benefit from the same menu of educational programs. The possibility of this assumption is the focus of special needs education. The critical issue is that we have persons/ learners who are totally different in their ways of living and learning as opposed to the majority. The difference can either be emotional, physical, sensory and intellectual learning challenged traditionally known as mental retardation.

These learners equally have the right to benefit from the free and compulsory basic education in the nearby ordinary/mainstream schools. Therefore, the schools' role is to enrol them and also set strategies to provide relevant education to them. The teacher therefore is requested to consider each learner's needs during teaching and learning process. Assessment strategies and conditions should also be

standardised to the needs of these learners. Detailed guidance for each category of learners with special education needs is provided for in the guidance for teachers.

### **3. ASSESSMENT APPROACH**

Assessment evaluates the teaching and learning methods through the collection and interpretation of evidence of an individual learner's progress in learning and makes a judgment about the learner's achievements measured against a set of defined standards. Assessment is an integral part of the teaching learning processes. In the new competence-based curriculum assessment must also be competence-based. The learner is given a complex situation related to his/her everyday life and asked to try to overcome the situation by applying what he/she learned.

Assessment will be organised at the following levels: school-based assessment, district examinations, national assessment (LARS) and national examinations.

#### **3.1.Types of assessment**

##### **3.1.1Formative and continuous assessment (assessment for learning)**

Continuous assessment involves formal and informal methods used by schools to check whether learning is taking place. When a teacher is planning his/her lesson, he/she should establish criteria for performance and behavioural changes at the beginning of a unit. At the end of every unit, the teacher should ensure that all the learners have mastered the stated key unit competences based on the criteria stated before going to the next unit. The teacher will assess how well each learner masters both the subject content and the generic competences described in the syllabus. From this, the teacher will gain a picture of the all-round progress of the learner. The

teacher will use one or a combination of the following: (a) observation (b) pen and paper (c) oral questioning and tests during or at the end of one or more learning units.

### **3.1.2. Summative assessment (assessment of learning)**

When assessment is used to record a judgment of the competence or performance of the learner it serves a summative purpose. Summative assessment gives a picture of a learner's competence or progress at any specific moment. The main purpose of summative assessment is to evaluate whether learning objectives have been achieved and to use the results for the ranking or grading of learners. The results of summative assessment are also used for deciding on progression, for selection into the next level of education and for certification. This assessment should have an integrative aspect whereby a student must be able to show mastery of all competences.

Summative assessment can be internally school based assessment or external assessment in the form of national examinations. School based summative assessment should take place once at the end of each term and once at the end of the year. School summative assessment average scores for each subject will be weighted and included in the final national examinations grade. School based assessment average grade will contribute a certain percentage as teachers gain more experience and confidence in assessment techniques. In the third year of the implementation of the new curriculum it will contribute 10% of the final grade, but will be progressively increased. Districts will be supported to continue their initiatives to organise a common test per class for all the schools to evaluate the performance and the achievement level of learners in each individual school. External summative assessment will be done at the end of S6.

### **3.2. Record keeping**

This is gathering facts and evidence from the assessment instruments and using them to judge the learner's performance by assigning an indicator against the set criteria or standard. Assessment procedures generate data in the form of scores which will be carefully

recorded and stored in a portfolio. These scores will contribute to remedial actions and alternative instructional strategies. They will also be used to provide feedback to the learner and their parents to check learning progress and to provide advice, as well as be used in the final assessment of the learners.

This portfolio is a folder (or binder or even a digital collection) containing the learner's work as well as the learner's evaluation of the strengths and weaknesses of the work. Portfolios reflect not only work produced (such as papers and assignments), but also it is a record of the activities undertaken over time as part of student learning. The portfolio output (formative assessment) will be considered only as enough for three years of the Advanced level. It will serve as a verification tool for each learner that he/she attended the whole learning before he/she undergoes the summative assessment for the subject.

### **3.3. Item writing in summative assessment**

Before writing a question paper, a plan or specification of what is to be tested or examined must be created. This will show the units or topics to be tested on, the number of questions in each level of Bloom's taxonomy and the marks allocation for each question. In a competence based curriculum, questions from higher levels of Bloom's taxonomy should be given more weight than those from the knowledge and comprehension level.

Before developing a question paper, the item writer must ensure that the test or examination questions are tailored towards competence based assessment by doing the following:

- Identify topic areas to be tested on from the subject syllabus.
- Outline subject-matter content to be considered as the basis for the test.
- Identify learning outcomes to be measured by the test.
- Prepare a table of specifications.

- Ensure that the verbs used in the formulation of questions do not require memorisation or recall answers only but test for broad competences as stated in the syllabus.

### Structure and format of the examination

There will be three papers in biology subject at advanced level. Paper 1: measures knowledge and understanding, paper 2 measures skills from higher levels of Bloom's taxonomy and paper 3 will measure practical/experimental skills. Time will depend on the paper's items, weight of the paper and learner's special education needs.

Paper	Component	Weighting
Paper 1	The paper will measure both knowledge of the subject matter and acquisition of competences. The paper will assess the first two (low) levels of Bloom's taxonomy, which is Knowledge and understanding. (100marks)	30%
Paper 2	The paper will assess skills, it will consist questions from higher levels of Bloom's taxonomy (application, analysis, evaluation and synthesis). (100marks)	40%
Paper 3	Practical skills: This paper to measures practical/experimental skills (Observation, Recording & report writing, Manipulation, Measurement, Planning & designing) The experiments should be	30%

	drawn from different topic areas of the syllabus. This paper requires candidates to carry out practical work in a set period of time. (100marks)	
--	--	--

### **Assessment of Subject objectives (AO)**

The assessment objectives listed below reflect those parts of the syllabus competences that will be assessed in the examination.

#### **A01 Knowledge with understanding**

- Scientific vocabulary, terminology and conventions (including symbols, quantities and units).
- Scientific instruments and apparatus used in biology, including techniques of operation and aspects of safety.
- Scientific quantities and their determination.

Candidates should be able to demonstrate knowledge and understanding of:

- Scientific phenomena, facts, laws, definitions, concepts and theories.
- Scientific and technological applications and their social, economic and environmental implications.

The subject content defines the factual knowledge that candidates may be required to recall and explain.

Questions testing these assessment objectives will often begin with one of the following words: *define, state, name, describe, explain (using your knowledge and understanding) or outline.*

## **A02 Handling information and solving problems**

Candidates should be able to handle information and solve problems using, written, symbolic, graphical and numerical forms of presentation to:

- Locate, select, organise and present information from a variety of sources.
- Translate information from one form to another.
- Manipulate numerical and other data.
- Use information to identify patterns, report trends and draw conclusions.
- Give reasoned explanations for phenomena, patterns and relationships.
- Make predictions and hypothesises.
- Apply knowledge, including principles, to new situations.
- Demonstrate an awareness of the limitations of biological theories and models.
- Solve problems.

These assessment objectives cannot be precisely specified in the syllabus content because questions testing such skills may be based on information which is unfamiliar to the candidate. In answering such questions, candidates are required to use principles and concepts that are within the syllabus and apply them in a logical, reasoned or deductive manner to a new situation.

Questions testing these assessment objectives will often begin with one of the following words: *discuss, predict, suggest, calculate, and explain (give reasoned explanations and explain the processes of using information and solving problems) or determine.*

### **A03 Experimental skills and investigations**

Candidates should be able to:

- Plan experiments and investigations.
- Collect, record and present observations, measurements and estimates
- Analyse and interpret data to reach conclusions.
- Evaluate methods and the quality of data and suggest possible improvements.

### **3.4. Reporting to parents**

The wider range of learning in the new curriculum means that it is necessary to think again about how to share a learners' progress with their parents. A single mark is not sufficient to convey the different expectations of learning which are in the learning objectives. The most helpful method of reporting is to share what students are doing well and where they need to improve.

## **3. RESOURCES**

### **4.1. Material resources**

Teaching and learning of biology necessitates practical activities and experiments for better understanding of facts. The successful implementation of this curriculum requires a biology laboratory, textbooks, charts and ICT tools like computers and projectors. However, there are some biology concepts that cannot be easily explained and some experiments that cannot be done in our school laboratories due to their nature or safety reasons. Thus the syllabus provides the opportunities to use ICT while studying to overcome concepts that cannot be well understood. The learners need to be confident and effective users of ICT.

These ICT opportunities include:

- gathering information from the internet, DVDs and CD-ROMs,
- gathering data using sensors linked to data –loggers or directly from the computers,
- using spreadsheets and other software to process data,
- using animations and simulations to visualise scientific data,
- using software to present ideas and information on paper and on screen

The list of basic materials and apparatus that a well equipped biology laboratory would contain is found in the appendix (**7a**). This list is not exhaustive other items may be required to allow for variety in the questions set.

#### **4.1. Human resources**

The effective implementation of this curriculum requires a joint collaboration of educators at all levels. Given the material requirements, teachers are expected to accomplish their noble role as stated above.

The following are detailed skills required for secondary school biology teacher:

- Animated and engaging personality, patient and tolerant attitude, passion for sharing knowledge, excellent verbal and written communication abilities, creativity and diverse methodologies for imparting ideas and knowledge.
- Knowledge of educational software, programs for recording, grading, and evaluating students' work and progress
- Ability to use a range of teaching tools for example, overhead projectors and other media-sharing devices. Proficiency with biology and lab experiment equipment, for example microscopes and slides

- Proficient in biology, able to motivate students and keep the classroom on task, a passion for life sciences and working with students, and proficient in the use and implementation of the latest technologies and tools

## 5. SYLLABUS UNITS

### 5.1. Presentation of the structure of the syllabus

The subject of biology is taught and learned in upper secondary education as a core subject, i.e. in S4, S5 and S6 respectively. At every grade where it is taught, the syllabus of biology for upper secondary is structured in the following eight (8) topic areas: biodiversity and classification, ecology and conservation, organisation and maintenance of life, reproduction, microbiology and biotechnology, health and disease, genetics and its applications, and selection and evolution. Topic areas are subdivided into sub-topic areas, and sub-topic areas are made up of 55 units: 20 in S4, 18 in S5 and 17 in S6. Each unit has the following common components:

1. Each unit is aligned with the periods or number of lessons.
2. Each unit has a key unit competence whose achievement is pursued by all teaching and learning activities undertaken by both the teacher and the learners.
3. Each unit key competence is broken into three types of Learning Objectives as follows:
  - a. **Type I:** Learning Objectives relating to Knowledge and Understanding (*Type I* Learning Objectives are also known as Lower Order Thinking Skills or LOTS)

- b. **Type II and Type III:** These Learning Objectives relate to the acquisition of Skills, Attitudes and Values (*Type II and Type III* Learning Objectives are also known as Higher Order Thinking Skills or HOTS). These Learning Objectives are actually considered to be the ones targeted by the present reviewed syllabus.
4. Each unit has content that indicates the scope of coverage of what should be taught and learnt in line with stated Learning Objectives.
  5. Each unit suggests learning activities that are expected to engage learners in an interactive learning process as much as possible (learner-centred and participatory approach).
  6. Finally, each unit is linked to other subjects, its Assessment criteria and the materials (or resources) that are expected to be used in the teaching and learning process.

## **5.2. Biology programme for S 4**

### **5.1.1. Key competences at the end of S 4**

- Explain how diversity is threatened by climate change and human activities.
- Apply the basic knowledge of classification to group living organisms into the three domains.
- Distinguish between the types of microscopy and their principal uses.
- Describe the structure and function of cells in an organism.
- Describe different specialised plant and animal cells and adaptation of tissues.
- Use tests for biological molecules in a variety of contexts, such as identifying the contents of mixtures of molecules and following the activity of digestive enzymes.

- Explain the important roles of carbohydrates and lipids in the provision and storage of energy and for a variety of other functions.
- Describe how protein structure is related to function and the role of water as a special molecule with extraordinary properties that make life possible.
- Discuss the roles of minerals and vitamins in diet.
- Describe the mode of action and factors affecting enzymes and their importance for the existence of life.
- Explain the principles of gaseous exchange systems.
- Describe structures of gaseous exchange organs in plants.
- Account for the processes of growth and development in plants and animals.
- Explain and demonstrate modes of locomotion in protists, insects, fish, amphibians, birds and mammals.
- Describe the social factors that affect good health and apply knowledge gained in familiar and unfamiliar contexts.
- Account for various methods of asexual reproduction as means of increasing crop yield.
- Describe sexual reproduction in plants.
- Describe the structure and characteristics of viruses, bacteria, and fungal and non-fungal moulds.
- Explain the process of culturing microorganisms and the factors affecting their population growth.
- Explain the biotechnology involved in production of ethanol, biogas and bread making.

### 5.1.2. Biology units Table for S 4

TOPIC AREA: BIODIVERSITY AND CLASSIFICATION			SUB-TOPIC AREA: BIODIVERSITY	
S4 Biology		Unit 1: Introduction to biodiversity.		No. of periods:6
Key Unit Competence: To be able to explain how diversity is threatened by climate change and human activities.				
Learning Objectives			Content	Learning Activities
Knowledge and understanding	Skills	Attitudes and values

**Materials:** *Online resources, CDs, simulations, diagrams, charts, micrographs, illustrations, cultured microorganisms, and materials to make biogas.*

## **5.2. Biology programme for S 5**

### **5.2.1. Key competences at the end of S 5**

- Explain complex relationships between organisms within their environment.
- Explain the physiological processes by which materials move in and out of cells and the significance of these processes in the life of organisms.
- Describe the structure of a chromosome and how DNA is folded in a chromosome.
- Explain the process of DNA replication and its significance to living organisms.
- Describe the stages of the cell cycle and explain the significance of cell and nuclear division in organisms.
- Explain the relationship of a gene to the sequence of nucleotides in DNA and describe the process of protein synthesis in eukaryotes.
- Describe the process of photosynthesis and explain the various environmental factors that influence the rate of photosynthesis.
- Describe the structure of the transport tissue in plants and the mechanisms by which substances are moved within the plant.
- Describe structures of gas exchange in different groups of animals.
- Describe the effects of tobacco smoking on the gas exchange system.
- Explain the general principles of homeostatic mechanisms.
- Explain the mechanism of the regulation of blood glucose levels.
- Explain the importance of thermoregulation and ways by which organisms regulate body temperature.
- Explain the different forms of behaviour and responses and their importance in the survival of organisms.
- Relate the structures of the human reproductive system to their functions and describe gamete formation.

- Describe the immune system and apply knowledge gained in familiar and unfamiliar contexts.
- Explain the role of genes in inheritance and genetic disorders.
- Describe the types, causes and effects of mutation in organisms.

### 5.2.2. Biology units Table for S 5

TOPIC AREA: ECOLOGY AND CONSERVATION			SUB-TOPIC AREA: ENVIRONMENTAL BIOLOGY	
<b>S5 Biology</b>	<b>Unit 1:</b> Interdependence between organisms within their environment.			<b>No. of periods:10</b>
<b>Key Unit Competence:</b> To be able to explain complex relationships between organisms within their environment.				
Learning Objectives			Content	Learning Activities
Knowledge and understanding	Skills	Attitudes and values		
<ul style="list-style-type: none"> <li>- Explain the various interactions of organisms in nature.</li> </ul>	<ul style="list-style-type: none"> <li>- Compare interspecific and intraspecific competition.</li> </ul>	<ul style="list-style-type: none"> <li>- Appreciate the relationships existing between organisms within their</li> </ul>	<ul style="list-style-type: none"> <li>- Interrelationships among organisms and their effects.</li> <li>- Inter and intraspecific relationships between</li> </ul>	<ul style="list-style-type: none"> <li>- Individually, classify examples of species interactions, e.g. competition, predation, parasitism, commensalism, and mutualism.</li> </ul>

<ul style="list-style-type: none"> <li>- State the significance of organisms' interactions in nature.</li> <li>- Explain the terms interspecific and intraspecific competition.</li> <li>- Describe the adaptations of predators to catch and kill prey and adaptations of prey to avoid predators.</li> </ul>	<ul style="list-style-type: none"> <li>- Interpret graphs for predator-prey relationships.</li> <li>- Classify examples of species interactions, e.g. competition, predation, parasitism, commensalism, and mutualism.</li> </ul>	<p>environment.</p> <ul style="list-style-type: none"> <li>- Recognise the role of saprophytes in mineral recycling.</li> </ul>	<p>organisms:</p> <ul style="list-style-type: none"> <li>○ Competition.</li> <li>○ Parasitism.</li> <li>○ Predation.</li> <li>○ Saprophytism.</li> <li>○ Mutualism.</li> <li>○ Mommensalism.</li> </ul> <ul style="list-style-type: none"> <li>- Significance of organisms' interactions in nature.</li> </ul>	<ul style="list-style-type: none"> <li>- Compare interspecific and intraspecific competition and give examples in each case.</li> <li>- In groups, discuss and interpret the graphical illustrations for relationships between predators and prey.</li> <li>- Observe predator-prey relationships in the environment or from wildlife movies.</li> </ul>
<p><b>Link to other subjects:</b> <i>Mathematics: graphs and data in tables for predator prey relationships.</i></p>				
<p><b>Assessment criteria:</b> <i>Students can clearly explain complex relationships between organisms within their environment.</i></p>				
<p><b>Materials:</b> <i>Ecological charts and graphs, audio visual data, computer aided material, and video-film materials (e.g. clips from YouTube).</i></p>				

<b>TOPIC AREA: ORGANISATION AND MAINTENANCE OF LIFE</b>			<b>SUB-TOPIC AREA: MOVEMENT IN AND OUT OF THE CELL</b>	
<b>S5 Biology</b>	<b>Unit 2: Transport across the cell membrane.</b>		<b>No. of periods:18</b>	
<b>Key Unit Competence:</b> To be able to explain the physiological processes by which materials move in and out of cells and the significance of these processes in the life of organisms				
<b>Learning Objectives</b>			<b>Content</b>	<b>Learning Activities</b>
<b>Knowledge and understanding</b>	<b>Skills</b>	<b>Attitudes and values</b>		
<ul style="list-style-type: none"> <li>- Describe and explain the processes and significance of movement in and out of the cell mentioned in the content.</li> </ul>	<ul style="list-style-type: none"> <li>- Apply the knowledge of hypertonic environments in food preservation by salting.</li> <li>- Carry out an</li> </ul>	<ul style="list-style-type: none"> <li>- Appreciate the importance of movement of substances across cells.</li> <li>- Show concern when exposing living</li> </ul>	<ul style="list-style-type: none"> <li>- Diffusion and factors affecting the process of diffusion.</li> <li>- Significance of process of diffusion in organisms.</li> <li>- Osmosis and significance in organisms.</li> </ul>	<ul style="list-style-type: none"> <li>- Investigate simple diffusion using plant tissues, non-living materials such as glucose solutions and visking tubing</li> <li>- Calculate surface areas and volumes of simple shapes e.g. cube to illustrate the principle that the surface area to volume</li> </ul>

<ul style="list-style-type: none"> <li>- Recall that the increasing size of organisms is constrained by its ability to obtain resources through diffusion across the cell surface and its ability to move substances out of cells.</li> <li>- Explain the movement of water between cells and solutions with different water potentials and explain the effects on plant and animal cells.</li> </ul>	<p>investigation on simple diffusion by using plant tissues and non-living materials.</p> <ul style="list-style-type: none"> <li>- Research adaptations of plants and animals to salty habitats.</li> <li>- Interpret and present data in graphic and table form on the effects of varying concentrations of : e.g. sugar , salt on plant and animal tissues</li> <li>- Distinguish between endocytosis and exocytosis.</li> </ul>	<p>organisms to concentrated media.</p>	<ul style="list-style-type: none"> <li>- Process of osmosis including: turgidity, plasmolysis, water potential, osmotic potential and wall pressure.</li> <li>- Osmosis in animal cells.</li> <li>- Active transport.</li> <li>- Process of active transport.</li> <li>- Factors affecting the process of active transport.</li> <li>- Significance of active transport in organisms.</li> <li>- Endocytosis: phagocytosis, pinocytosis, exocytosis.</li> </ul>	<p>ratio decreases with increasing size.</p> <ul style="list-style-type: none"> <li>- In groups, investigate and present the effects of immersing plant tissue in solutions of different water potentials. Use the results to estimate the water potential of tissues.</li> <li>- Learners interpret data on movement of solvents and ions in and out of the cell in a table or graph form.</li> </ul>
---	--	---	---	--

**Links to other subjects:** *Physics and chemistry: diffusion and concentrations.*

**Assessment criteria:** *Students can clearly explain the physiological processes by which materials move in and out of cells and the importance of these processes in the life of organisms.*

**Materials:** *Potato tubers, pawpaw petioles, unripe pawpaw fruits, filamentous algae, onion epidermis, slides and microscopes, visking tubing, knives, potassium permanganate, methylene blue, water, sucrose solutions of varying concentrations, and animal tissues e.g. blood smear of a frog.*

<b>TOPIC AREA: ORGANIZATION AND MAINTENANCE OF LIFE</b>			<b>SUB-TOPIC AREA: CELL DIVISION</b>	
<b>S5 Biology</b>	<b>Unit 3: Chromosomes and nucleic acids.</b>		<b>No. of periods:12</b>

Outline how such mutations may affect the phenotype.</li> <li>- Explain that the environment may affect the phenotype.</li> <li>- Outline the effects of mutant alleles on the phenotype in the following human conditions: albinism, sickle cell anaemia, haemophilia and Huntington's disease.</li> </ul>	<ul style="list-style-type: none"> <li>- Distinguish between gene and chromosomal mutation.</li> <li>- Use a thin clay log composed of different colours to represent different chromosomes.</li> <li>- Manipulate the clay to show how an inversion can occur.</li> <li>- Use internet to search simulations of mutations and deduce the findings.</li> </ul>	<p>may or may not result in evolution.</p>	<ul style="list-style-type: none"> <li>- Causes of mutation: chance, radiation, and chemical.</li> <li>- Effect of mutations on the phenotype.</li> <li>- Effect of environment on the phenotype.</li> <li>- Significance of mutations.</li> </ul>	<p>genes in order to show how an inversion can occur.</p> <ul style="list-style-type: none"> <li>- Use computer simulations to discuss the types and significance of mutations.</li> <li>- In groups, use charts and illustrations to show how sickle cell anaemia is inherited and outline the features of the offspring with or without sickle cell anaemia.</li> </ul>
---	--	--	--	---

<ul style="list-style-type: none"> <li>- Explain the relationship between genes, enzymes and phenotypes with respect to the gene for tyrosinase involved in the production of melanin.</li> <li>- Explain how a change in the base sequence of the gene for haemoglobin results in abnormal haemoglobin and sickle-shaped red blood cells.</li> </ul>				
---	--	--	--	--

**Links to other subjects:** *Agriculture: genetics and variation.*

**Assessment criteria:** *Students can clearly describe the types, causes and effects of mutation in organisms.*

**Materials:** *Online resources, CDs, computer simulations, diagrams, charts, micrographs, clay logs, and illustrations.*

### **5.3. Biology programme for S 6**

#### **5.3.1. Key competences at the end of S 6**

- Describe the factors affecting population size and the importance of natural resources.
- Describe the different components of an ecosystem, biogeochemical cycles and how energy flows in an ecosystem.
- Evaluate the effects of human population size, resource use, and technology on environmental quality.
- Relate the structures of the circulatory and lymphatic systems to their functions.
- Describe the structure and importance of ATP, and outline the roles of the coenzymes NAD, FAD and coenzyme A during cellular respiration.
- Describe the process of cellular respiration.
- Explain the principles of excretion and osmoregulation.
- Explain the general principles of reception and response in animals.
- Describe the structure of neurones and explain the mechanisms of impulse transmission.
- Identify the location and function of endocrine glands in the body.
- Explain the structure of muscles in relation to movement.
- Explain the role of hormones in human reproduction, stages of pregnancy and foetal development.
- Explain the principles of gene technology.
- Evaluate how gene technology is applied in areas of medicine, forensic science and agriculture.
- Explain variation and mutation as a source of biodiversity.

- Explain the role of artificial and natural selection in production of varieties of animals and plants with increased economic importance.
- Analyse the relevance of theories of evolution and explain the process of speciation.

### 5.3.2. Biology units Table for S 6

TOPIC AREA: ECOLOGY AND CONSERVATION			SUB-TOPIC AREA: ENVIRONMENTAL BIOLOGY	
<b>S6 Biology</b>	<b>Unit 1: Population and natural resources.</b>			<b>No. of periods:14</b>
<b>Key Unit Competence:</b> To be able to describe the factors affecting population size and the importance of natural resources.				
Learning Objectives			Content	Learning Activities
Knowledge and understanding	Skills	Attitudes and values		
<ul style="list-style-type: none"> <li>- State and define population characteristics.</li> <li>- Explain factors that affect</li> </ul>	<ul style="list-style-type: none"> <li>- Demonstrate methods used in estimating populations by using quadrats and line</li> </ul>	<ul style="list-style-type: none"> <li>- Support that human population explosion impacts negatively on</li> </ul>	<ul style="list-style-type: none"> <li>- Population characteristics: density, age structure, growth pattern, birth and death rates.</li> <li>- Population density: dependent</li> </ul>	<ul style="list-style-type: none"> <li>- Learners practically estimate populations using quadrats and line transects.</li> <li>- Learners use the capture-recapture method and the</li> </ul>

<p>population density.</p> <ul style="list-style-type: none"> <li>- Explain population growth patterns.</li> <li>- Explain the terms renewable and non-renewable resources.</li> <li>- Explain how environmental resistance affects the balance of nature.</li> <li>- Explain the importance of natural resources in growth of the Rwandan economy and methods of conservation.</li> </ul>	<p>transects.</p> <ul style="list-style-type: none"> <li>- Research how the human population has grown over the past 250 years.</li> <li>- Compare statistics on the population age-sex structure of developing and developed countries.</li> <li>- Analyse the costs and benefits of managing renewable and non-renewable resources.</li> </ul>	<p>the environment.</p> <ul style="list-style-type: none"> <li>- Recognise that some resources are renewable and others are non-renewable and that effective use of these resources is of great value.</li> <li>- Justify the practice of family planning as a tool for reducing population explosion.</li> </ul>	<p>and independent factors.</p> <ul style="list-style-type: none"> <li>- Methods or techniques of measuring and estimating population density.</li> <li>- Population growth patterns.</li> <li>- Environmental resistance (density dependent factors that affect the balance of nature).</li> <li>- Natural resources (renewable and non-renewable).</li> <li>- Importance of natural resources and methods of conserving natural resources.</li> </ul>	<p>Lincoln index to estimate population sizes.</p> <ul style="list-style-type: none"> <li>- Use illustrations and videos to discuss population growth patterns of organisms.</li> <li>- Learners discuss how the human population has grown over the past 250 years.</li> <li>- Learners compare statistics on the population age-sex structure of developing and developed countries and discuss the implications to resource use.</li> <li>- Discuss how environmental resistance affects the balance of nature.</li> <li>- In pairs undertake a research project on the importance of natural resources in the growth of the Rwandan economy and methods of conservation.</li> </ul>
--	--	---	---	---

**Links to other subjects:** *Economics and geography: use of natural resources in relation to population.*

**Assessment criteria:** *Students can clearly describe the factors affecting population size and the importance of natural resources.*

**Materials:** *Quadrates, pegs, strings/ropes, specimen bottles, markers, and computer aided simulations of population growth and statistics*

*on human populations in different countries.*

## **7. APPENDIX**

### **7.1. List of laboratory materials and equipments**

This is a list of basic materials and apparatus that a well-equipped biology laboratory would contain. Many of these items are regularly used in Paper 3. The list is not exhaustive. Other items may be required to allow for variety in the questions set.

In accordance with the COSHH (Control of Substances Hazardous to Health) Regulations, operative in Rwanda, a hazard appraisal of the list has been carried out.

The following codes have been used where relevant. C = corrosive substance, F = highly flammable substance, H = harmful or irritating substance, O = oxidising substance, and T = toxic substance.

#### **General:**

- Test-tubes and large test-tubes (boiling tubes) – some test-tubes should be heat resistant.
- Test-tube holders or similar means of holding tubes.
- Test-tube racks or similar places in which to stand tubes.
- Bungs to fit test-tubes/boiling tubes.
- Bungs with delivery tube to fit test-tubes/boiling tubes.
- Specimen tubes with corks.
- A means of heating – Bunsen burners or similar (candidates should be familiar with setting up and maintaining a water-bath).
- Thermometers.

- Measuring cylinders.
- Means of measuring small volumes, such as syringes (various sizes).
- Plastic tubing or rubber tubing to fit syringes.
- Teat pipettes (plastic or glass).
- Beakers (various sizes).
- Tripod stands and gauzes.
- Filter funnels and filter paper.
- Petri dishes (plastic) or shallow containers to hold small volumes (e.g. 20 cm<sup>3</sup>).
- White tiles or other suitable surfaces on which to cut.
- Spotting tile or similar with space for 12 separate drops.
- Glass slides and cover slips.
- Conical flasks.
- Clamp (retort) stands and bosses.
- Visking (dialysis) tubing or suitable alternative.
- Capillary tubing.
- Soda glass tubing.
- Paper towelling or tissue.
- Cotton wool.
- Solid glass rods.
- Spatulas.

- Black paper/aluminium foil.
- Means of writing on glassware (water-resistant markers).
- Hand lenses (not less than x6, preferably x8).
- Forceps.
- Scissors.
- Mounted needles.
- Cutting implement, such as solid-edged razor blade/knife/scalpel.
- Rulers in mm (ideally clear plastic).
- Mortars and pestles.
- Safety spectacles or other suitable eye protection.
- Microscope and lamp/inbuilt illumination with high-power and low-power objective lenses (1 each or 1 between 2).
- Eyepiece graticules and stage micrometer scales.
- Microscope slides and glass cover slips.
- Haemocytometers.
- Bench lamp with flexible arm.
- Balance (to 0.1 g).
- Water-baths (thermostatically controlled) or means to supply hot water.
- Cork borers.
- Stop clock/timer showing seconds.
- Simple respirometer – can be ‘homemade’.

- Pipe cleaners/other suitable aid to demonstrate mitosis and meiosis.
- Culture bottles, autoclave.
- Inoculating loops/wires.
- Tape for sealing dishes.
- Cultures of live yoghurt.
- Appropriate cultures of microorganisms, such as *Escherichia coli*, *Bacillus subtilis*.

**Stocks of:**

- [H] – Iodine in potassium iodide solution.
- [H] – Benedict's solution.
- [C] – Biuret reagent/potassium hydroxide and copper sulfate solution.
- [F] – Ethanol (for fats test).
- [F] – Methylated spirit (for extraction of chlorophyll).
- Sucrose (use Analar (AR) for non-reducing sugar test. Some types of table sugar contain reducing sugars.).
- Glucose.
- Starch.
- Albumen (or egg white).
- [C] – Potassium hydroxide.
- [C] – Sodium hydroxide.
- Sodium chloride.

- [H] – Dilute hydrochloric acid.
- Hydrogencarbonate indicator (with air pump to equilibrate to atmospheric carbon dioxide).
- Sodium bicarbonate/sodium hydrogencarbonate.
- [H] – Limewater.
- [H] – Hydrogen peroxide.
- Distilled/deionised water.
- Universal Indicator paper and chart.
- Litmus solution and red and blue litmus paper.
- Eosin/red ink.
- [F] – Thymolphthalein indicator.
- [H] – Bromothymol blue.
- [H] – Methylene blue.
- Vaseline/petroleum jelly (or similar).
- DCPIP (dichlorophenol-indophenol).
- Ascorbic acid (vitamin C).
- Diastix for testing glucose concentration.
- Albustix or another appropriate test strip for testing protein.
- [H] – Enzymes: amylase, trypsin (or bacterial protease).
- Materials for preparing immobilised enzymes: calcium chloride, sodium alginate.
- Plant sources of catalase, e.g. sweet potatoes, mung beans, potatoes.

- Wheat, barley or similar as a source of starch.
- Non-competitive enzyme inhibitor (e.g. [H] – copper sulfate – hydrated).
- Stains for preparing slides to show mitosis, e.g. acetic carmine, toluidine blue.
- [H] – Feulgen stain (Schiff's reagent).
- Nutrient broth, nutrient agar and technical agar (Note: technical agar is suitable for making agar blocks).
- Appropriate disinfectants.
- Solvents for chromatography of chloroplast pigments.
- Aquatic plants for photosynthesis investigations, e.g. Elodea, Cabomba.

#### **Apparatus for field work:**

- Beating tray ('homemade').
- Pooter ('homemade').
- Sweeping net (muslin).
- Plankton net and dip net (if aquatic environment is being sampled).
- Pitfall trap/jam jar with suitable cover to prevent water entry.
- Trays for hand sorting.
- Frame quadrats, open or gridded.
- Tape measures.

#### **Slides: For A Level**

- Mitosis
- TS stem, TS root and TS leaf of, for example, dicotyledonous mesophyte (such as Ligustrum or Prunus or local equivalent), maize, rice, sorghum, wheat, xerophytes leaves.
- LS stem, LS root to show xylem vessel elements and sieve tube elements and companion cells.
- TS trachea, TS bronchus, TS bronchioles.
- TS lungs to show alveoli.
- TS artery, TS vein.
- Blood smear.
- Animal and plant cells; Protoctists (e.g. Amoeba, Euglena or local equivalents, for example from a culture made with water and hay to stimulate single cell organisms).
- Meiosis.
- TS anther, TS ovule.
- Pollen.
- VS maize fruit.
- TS kidney.
- TS spinal cord.
- Examples of organisms representing the three kingdoms: Protoctista (e.g. Amoeba, Euglena or locally available equivalents); Prokaryotae (e.g. bacterial smear, cyanobacteria); Fungi (e.g. yeast, penicillium).

## 7.2. Subjects and weekly time allocation for A'level

Subjects in Secondary 4-6		Number of periods per week (1 period = 40 min.)		
		S4	S5	S6
Core subjects				
Mathematics		7	7	7
Physics		7	7	7
Computer Science		7	7	7
Chemistry		7	7	7
Biology		7	7	7
Geography		7	7	7
History		7	7	7
Economics		7	7	7
Literature in English		7	7	7
Kinyarwanda major		7	7	7
Kiswahili major		7	7	7
French major		7	7	7
Religion major		7	7	7
Entrepreneurship		6	6	6
General Studies and Communication Skills		3	3	3
Subsidiary Mathematics		3	3	3
Electives Subjects	English minor	4	4	4
	French minor	4	4	4
	Kinyarwanda minor	4	4	4
	Kiswahili minor	4	4	4

Co-curricular Activities	Religious activities	2	2	2
	Sports/ Clubs	2	2	2
	Computer/library	2	2	2
